

XO Design, Iron Patio Rails

Custom length as required. All rails are primed black. Railings are used to enclose patios, core drill installation required. Rails are 36" tall after installation. Rails can be built to connect to each other or stand as separate units. Design always remains the same. Length will vary as required per layout - Please advise.

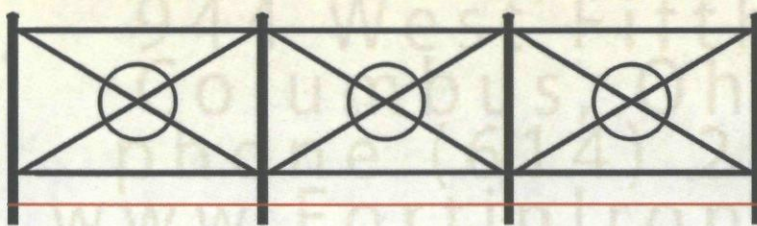

XO-Single Panel Iron - Patio Rail

36" Tall - 3ft to 6ft long
Installs into patio

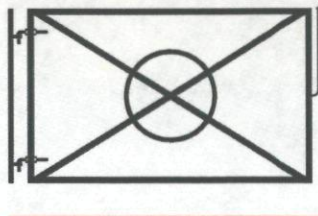

XO-Double Panel Iron - Patio Rail

36" Tall - 6ft to 12ft long
Installs into patio

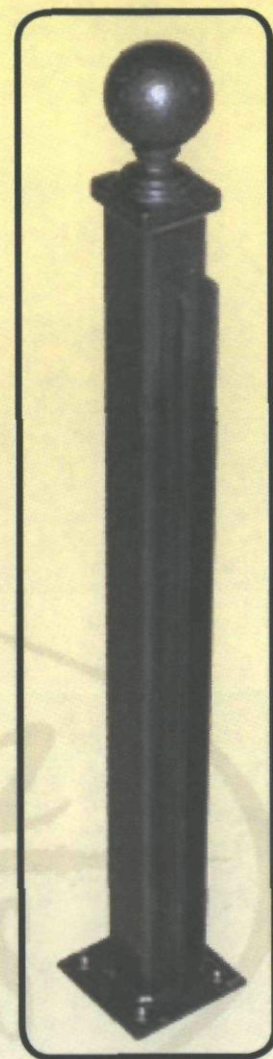

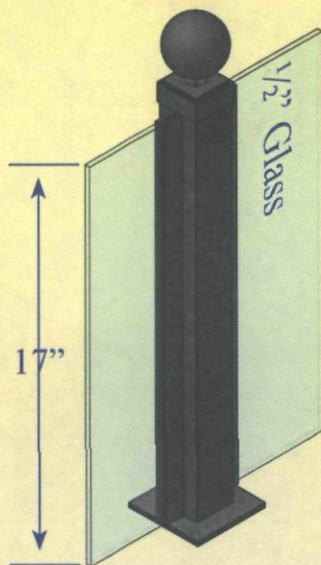

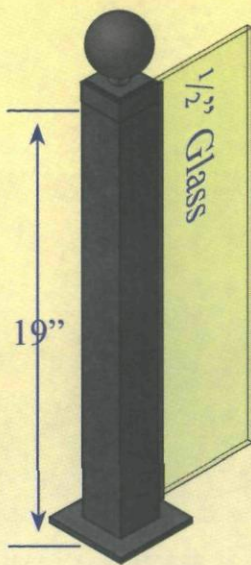

XO-Triple Panel Iron - Patio Rail

36" Tall - 12ft to 18ft long
Installs into patio

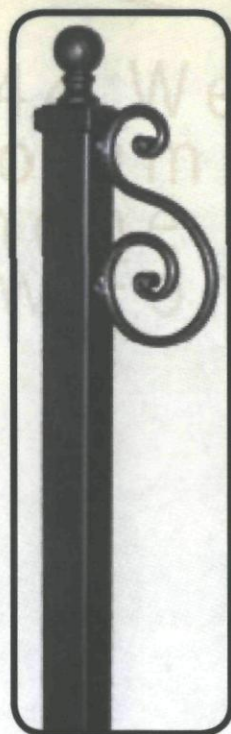

XO-Single Gate Iron - Patio Rail

36" Tall - 3ft to 4ft long
Installs into existing rail posts

GP-18-END
GP-18-LINE
GP-18-CORNER
Iron - Glass Partition Holder
 22½" Tall - Freestanding
 1½" Square Tubing
 Channel on one side to hold glass

SLP-13
Iron - String Light Post
 12ft. tall after core-drill installation
 Eyelet for holding string lights
 Special Lengths Available

TOKISTAR'S EXHIBITOR SERIES

An Energy-Efficient Low-Voltage Lighting System For Use In All Environments

Frosted or clear globes attached to steel cable is a popular application, reminiscent of a time when strings of light were festooned over open-air markets to provide illumination.

Wedge-base xenon lamps are protected within the cover of seamless and shatterproof polycarbonate globes to provide lasting appeal. These long-life lamps provide for low maintenance and have the apparent brightness of much higher wattage lamps.

The energy savings, combined with its safe low-voltage operation, make Exhibitor Series ideally suited for use in amusement parks, shopping malls, restaurants, casinos, bridges, street decorations, promenades and more.

PRODUCT SPECIFICATIONS

Shatterproof polycarbonate globes are injection blow-molded for excellent clarity and a seamless appearance. Each globe is fitted with an o-ring to ensure a very snug fit and weatherproof seal.

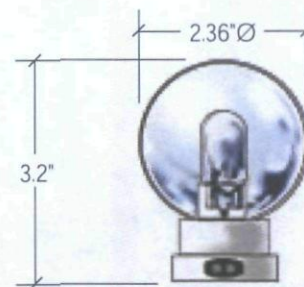

Wedge-base xenon lamps are available in three different wattage levels.

Sockets are permanently fixed to cable and sealed with silicone. Each socket is wired to the cable in parallel so individual lamp failures do not effect the operation of others. Sockets are available in black or white.

Highly flexible cable contains AWG 12 stranded and plated conductors. Cable is available in black or white.

PRODUCT SELECTION GUIDELINES

The three key considerations in specifying the Exhibitor System are:

1. LAMP SPACING

Select the most distant lamp spacing necessary to meet the design goal.

Spacing lamps closer together does not necessarily add more impact. If lamps are spaced too close together, the effect of distinct points of light will be lost from distant viewing perspectives.

2. LAMP STYLE

The proper selection is influenced by surrounding light levels and viewing distance. For long-range viewing or higher-ambient settings, the 7.5 or 4.2 watt lamp may be required. The 2.6 watt lamp is ideal for most applications within short viewing distance.

3. VOLTAGE DROP

Since this is a low-voltage system, consideration should be given to its voltage-drop characteristics. In some cases, the best product selection may be influenced by the fixture's maximum length. Refer to the chart on the back page for this data.

MOUNTING OPTIONS

Exhibitor Series can be securely mounted to any structure with our screw-down mounting disks or mounting straps. For festoon applications from 1/8" or 3/16"Ø wire rope, select our mounting disk with adaptor.

VOLTAGE DROP DATA

The voltage drop chart indicates the maximum number of lamps recommended on an independent length of fixture. This chart is based upon a 5 foot lead wire from the first lamp. If additional lead wire is required, deduct that additional amount from the figures shown. For example, if you require a 15 foot lead, deduct 10 feet from the figure shown. For voltage drop data on custom spacings not shown, consult factory for recommended fixture length. All figures are based upon approximately 7% voltage drop.

MAXIMUM # OF LAMPS (FT.) PER FIXTURE

LAMP SPACING	LAMP STYLE		
	112	212	124
6"	61 (30')	51 (25')	61 (30')
12"	46 (45')	36 (35')	56 (55')
24"	33 (64')	26 (50')	41 (80')

TRANSFORMERS

Transformers are ETL Listed to UL Standard 1571 for use with lighting fixtures, and provided in Nema 3R raintight enclosures. Input voltage is 120 VAC/60 Hz.

Secondary outputs are protected by fuses, with a maximum rating of 25 amps.

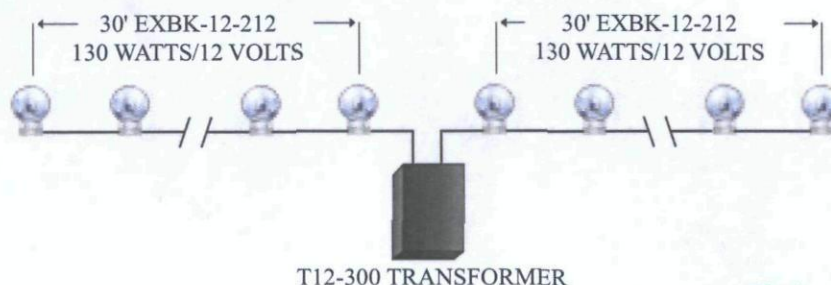

Exhibitor Lighting fixtures are rated to a maximum of 20 amps.

PART #	OUTPUT	WATTS	FUSES	LAMP CAPACITY			APPROX SIZES AND WEIGHT			
				112	212	124	LENGTH	HEIGHT	WIDTH	WEIGHT

T24-750	24 VAC	750	2 @ 15 AMP	N/A	N/A	90	7"	9"	5"	22 LBS
T24-1000	24 VAC	1,000	2 @ 25 AMP	N/A	N/A	120	7"	9"	5"	32 LBS

NOTE: TRANSFORMER CAPACITIES INCLUDE A 10% DERATING FACTOR. CONSULT FACTORY FOR VOLTAGES/WATTAGES NOT SHOWN.

TYPICAL SYSTEM LAYOUT

The most efficient layout must take into consideration the fixture's maximum length and transformer output capacity. Longer runs of product can be operated by centrally locating transformers and feeding fixtures to either side.
