

August 6, 2022

To whom it may concern,

With regards to the proposed AT&T wireless communications facility, Waste Management COW #2 (16th Hole), this site will operate within all regulations specified by the Federal Communications Commission.

The maximum allowable public exposure set forth by the FCC for this type of facility is one (1) milliwatt per square centimeter. As planned, the calculated maximum value of ground level exposure for this facility will not exceed 0.002892 milliwatts per square centimeter.

Additionally, all FCC required RF safety signage will be posted at the proposed facility.

If I may be of further assistance, please contact me.

Sincerely,

Robert Hammersmark
AT&T Market RF Safety Coordinator
