Here you go.

Incidents: the number of calls for service in the response area that will be served by FS612
Stations: which stations ran the calls into the response area that will be served by FS612
Response times: of those fire trucks that responded.

I understand there was a question as to why a station is needed if one is 3.9 Miles away to the east and of course the answer is obvious when you look at the response times. The Airport and arrangement of the streets do not allow for quicker travel times.

Also to my knowledge there was never a plan to locate the station on the north side of the site plan near the freeway.

Let me know if you need anything else.

Good morning Tim, I was at the commission meeting last night. Do you want me to send you response time info that the commissioner was asking for regarding Fire Station 612?
