

**6737 E Almeria Road, Scottsdale, AZ 85257**

### **Project Narrative**

We would like to improve our home by replacing its windows. This project aims not only to enhance the visual appeal of the residence but also to improve energy efficiency and elevate overall living standards.

The scope of the project encompasses identifying, sourcing, and installing new windows across various areas of the house. The primary objectives are to upgrade the home's aesthetics, improve insulation, and contribute to long-term energy savings.

The existing windows are original to the home (built in the 1950s) and show signs of wear and reduced energy efficiency. In addition, one of the windows has broken glass with a large hole in it. This project is a strategic investment in enhancing our home's functionality and curbing energy costs over time. The new windows will also align with the historic nature of the home, ensuring a cohesive and visually pleasing living space.

Careful consideration has been given to the design and material selection to ensure a harmonious blend with the existing architecture. Energy-efficient materials will be utilized to maximize insulation and minimize A/C loss, contributing to a more sustainable and eco-friendly living environment.

We are identifying qualified contractors with a proven track record in window replacement. The chosen contractor will bring expertise, professionalism, and a commitment to delivering high-quality workmanship, ensuring the success of this project.

The window replacement project is not merely a renovation; it is an investment in the future comfort, sustainability, and aesthetics of our home. With careful planning, adherence to historic preservation commission, and collaboration with trusted professionals, we anticipate a seamless transition to a rejuvenated living space that reflects our vision for an upgraded and energy-efficient home.
