APPENDICES:

1. INTRODUCTION

This Preliminary Drainage Report represents the storm water analysis for the development of four aircraft hangar buildings with peripheral parking and taxiway connectors proposed in the City of Scottsdale adjacent to the Municipal Airport. The purpose of this report is to provide the hydrologic and hydraulic analysis, required by the City of Scottsdale, to support the proposed improvement plans for said development. This report includes discussions and calculations defining the storm water management concepts for the collection and conveyance necessary to comply with the drainage requirements of the City of Scottsdale and Maricopa County. Preparation of this report has been done in accordance with the requirements of the City of Scottsdale Design Standards & Policies Manual (DS&PM) 2018 [1], and the Drainage Design Manuals for Maricopa County, Arizona, Volume I[2] and Volume II[3].

2. LOCATION AND PROJECT DESCRIPTION

2.1 LOCATION:

The subject property consists of land located in a portion of the Northeast Quarter of Section 11, Township 3 North, Range 4 East of the Gila and Salt River Base and Meridian, Maricopa County Arizona:

- Parcel ID: 215-56-421B and 215-56-247B.
- Address: 14930 N. 78TH Way Scottsdale, AZ 85260.

Refer to **FIGURE 1** - **Vicinity Map** for the project's location with respect to major cross streets.

2.2 EXISTING AND PROPOSED DEVELOPMENTS SURROUNDING THE SITE:

- North:
  - Parcel 215-56-413E; City of Scottsdale Municipal Airport.
- South: Across N. 78rd Way
  - Parcel 215-56-245A; Storage building.
  - Parcel 215-56-246A; Storage building.
  - Parcel 215-55-023A; Commercial building.
- East: Across N. 78th Way
  - Parcel 215-56-224A; Office building.
  - Parcel 215-56-413E; City of Scottsdale Municipal Airport.
- West:
  - Parcel 215-56-428A; Commercial building.

2.3 EXISTING SITE DESCRIPTION:

The project area includes two parcels of approximately 8.27 and 0.58 acres of land and are designated with zoning I-1. Per Topographic Survey by AW Land Surveying, Inc., the site topography slopes from the north to south at a 1.00% slope.

There are not any recorded existing open retention basins on-site, however there was a natural retention area located on the southwesterly side of the site where the water was generally retained.

Refer to **FIGURE 2** attached to an aerial of the site.

2.4 PROPOSED SITE DEVELOPMENT:

Site development includes the construction of two drive entrances, four hangar buildings, office space, parking, plane maneuvering, drive aisles, and landscape areas. The project will also include an off-site connection to the airport taxiway.

Refer to **APPENDIX III** –Grading and Drainage Plans for site layout.

2.5 FLOOD HAZARD ZONE:

FIRM Map Number 04013C1760L dated October 16, 2013, indicates the site is designated as Zone "X-Shaded". As such, it is defined as areas determined to be an area of 0.2% annual chance flooding with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance.

Refer to **FIGURE 3** for the FIRM.

3. EXISTING DRAINAGE CONDITIONS

3.1 OFF-SITE DRAINAGE PATTERNS

The topographic survey provides the following information for offsite drainage:

- *North*: Half of the runoff from the airport runway flows towards the site, where it is collected in an aggregate lined channel and travels southwest away from the site. No flows from the north affect the site.
- *East*: Runoff from the parcel east flows toward the N 78TH Way and is conveyed via curb and gutter southwesterly to an existing catch basin. No flows from the east affect the site.
- *West*: Runoff from the parcel west of the site is directed overland into an open retention basin located in the southeast of the parcel. No flows from the west affect the site.
- *South*: Half of the runoff from N 78TH Way flows toward the site where it is conveyed southwesterly via curb and gutter away from the site to an existing catch basin. No flows from the south affect the site.

3.2 ON-SITE DRAINAGE

Based on the topographic information all existing runoff is directed to a depression area located on the southwest side of the site.

Refer to **APPENDIX II** for **Existing Conditions Drainage Area Map** and **Existing Site Discharges Calculations**.

Table 1 below is a summary of existing conditions runoff calculations:

TABLE 1: EXISTING SITE DISCHARGES

EXISTING SITE DISCHARGES									
	Total Area	Cwt	Intensity 10 yr	Q 10	Intensity 100 yr	Q 100	Control Point	Total flows Q10	Total flows Q100
	(ac)	(-)	(in/hr)	(cfs)	(in/hr)	(cfs)	CP#	(cfs)	(cfs)
	10.19	0.52	-	-	-	-	-	20.64	35.46
EX-A1	8.86	0.46	3.99	16.27	6.86	27.97	CP-1	16.27	27.97
EX-OFF-1	1.17	0.90	3.53	3.73	6.14	6.49	EX-CB-1	3.73	6.49
EX-OFF-2	0.16	0.83	4.84	0.64	7.61	1.01	EX-CB-2	0.64	1.01

Overall project area includes **10.19 Acres at C_{wt}= 0.52** (Existing conditions).

Refer to **TC Calculations, Existing Cwt Exhibit and Existing Conditions Drainage Area Map** in **APPENDIX II.**

4. PROPOSED STORM WATER MANAGEMENT

4.1 DESIGN INTENT:

Given that the site has not been previously developed, on-site retention shall be calculated per City of Scottsdale DSPM 4-1.201. The site's runoff will be directed to two proposed underground retention basins and two open retention basins. Retention will be provided for the 100-year 2-hour storm event for the proposed development:

- Flows from drainage areas DA-A1 to DA-A5 and DA-AR1 through DA-AR8 will be directed into underground retention Basin A.
- Flows from drainage areas DA-B1 to DA-B5 and DA-BR1 through DA-BR12 will be directed into combined retention system (Basin B), consisting of underground retention Basin B1 and open retention Basin B2. Open retention Basin B2 will direct stormwater to Basin B1 via a CMP riser prior to filling up.
- Flows from drainage area DA-C1 will be retained into open retention Basin C.
- Flows from drainage area DA-D1 will be directed overland into EX-CB-2.
- Runoff from the offsite drainage area OFF-1 discharges into an existing catch basin (EX-CB-1).
- Runoff from the offsite drainage area OFF-2 discharges into an existing catch basin (EX-CB-2).

Refer to **APPENDIX II** for **Proposed Conditions Drainage Area Map**.

4.2 DESIGN STORM REQUIREMENTS:

In accordance with City of Scottsdale requirements for undeveloped lots, stormwater storage is required for the 100-year, 2-hour storm event.

4.3 LAND CHARACTERISTICS:

The proposed project site consists of a hangar space, office space, parking, plane maneuvering area, drive aisles, and landscape areas. Based on the DS&PM, runoff coefficients for the 100-year storm event used are as follows:

- C=0.95 for building or concrete
- C=0.95 for paved surface
- C=0.45 for undisturbed natural desert or desert landscape

HYDROLOGIC ANALYSIS: The hydrologic analysis is determined using the procedures in the City of Scottsdale Design Standards & Policies Manual and the Drainage Design Manual for Maricopa County, Arizona, Volume I.

Table 2 below is a summary of proposed conditions runoff calculations:

TABLE 2: PROPOSED SITE DISCHARGES

PROPOSED SITE DISCHARGES									
	TOTAL AREA	Cwt	Intensity 10 yr 5-min	Q 10	Intensity 100 yr 5-min	Q 100	Concentration Point	Total flows Q10	Total flows Q100

Overall project area includes **10.19 Acres at C_{wt} = 0.89** (Proposed conditions)
Refer to the **Proposed Conditions Cwt and Proposed Conditions Drainage Area Map** in **APPENDIX II**.

4.4 STORMWATER RETENTION:

100-YR, 2-HR STORM: Per City of Scottsdale DSPM 4-1.201, development storage requirements for the 100-yr, 2-hr storm event are calculated as follows:

$$V_r = C\left(\frac{R}{12}\right)A$$

where:
V_r = Required storage (cf)
R = Precipitation amount =2.24 in per NOAA Atlas 14 Precipitation Frequency Estimates
A = Total area of site
C = Runoff coefficient

Basin A:

Basin B Total	**3.12**	**0.86**	**2.24**	**0.502**	**21,867.53**

Basin C:

TABLE 5: BASIN REQUIRED STORAGE VOLUME CALCULATIONS

Required Existing Storage Volume Calculations					
					Vr=1*(P/12)*Cw*A
					P=100-yr,24-hr= 2.24in.
Drainage	Area	C	Depth	Volume Req.	Volume Req.
Area ID	(acres)	(-)	(in)	(acre-ft)	(CF)
ON-SITE RETENTION - BASIN C - Open Retention					
DA-C1	0.22	0.46	2.24	0.019	823.42
Basin C Total	**0.22**	**0.46**	**2.260**	**0.019**	**823.42**

Retention shall be provided for the 100-yr, 2-hr event therefore on-site retention will be designed to store the required 40,432 cf for Basin A, 21,277 cf for Basin B and 823 cf for Basin C. Provided storage for proposed conditions is calculated below:

Basin A provided storage:
Basin A will consist of a 520' x 10' x 8' concrete chamber.
V_P = Length* Width * Height
V_P = 520 ft x 10 ft x 8 ft = 41,600 cf.

Basin B1 provided storage:
Basin B1 will consist of a 10' diameter corrugated metal pipe and will have a length of 280 LF.

$V_P = \pi$* Pipe radius^2 * Pipe length
$V_P = (\pi * 5^2)*(280) = 21{,}991$ cf.

Basin B2 provided storage:

BASIN B2					
ELEV.	AREA	DEPTH	AVG VOLUME	SUM VOLUME	COMMENT
(FT)	(SF)	(FT)	(CF)	(CF)	
1457.0	3,024			0.00	Bottom
		1.00	3,878.61		
1458.0	4,733			3,878.61	**Volume Provided**

Basin C provided storage:

BASIN C

(FT)	(SF)	(FT)	(CF)	(CF)	
1460.8	1,347			0.00	Bottom
		0.50	839.84		
1461.3	**2,012**			839.84	**Volume Provided**

***TABLE 6*: PROPOSED RETENTION BASIN SUMMARY**

Proposed Retention Basin Summary					
Basin		TYPE	Vp	Vptotal	Vr
(ID)		(--)	(CF)	(CF)	(CF)
Basin A	BASIN A	UG	41,600	41,600	40,432
Basin B	BASIN B1	UG	21,991	25,870	21,868
	BASIN B2	OPEN	3,879		
Basin C	BASIN C	OPEN	840	840	823
Total:				**68,310**	**63,123**

The proposed basins have enough capacity to store the required additional volume generated from the 100-yr, 2-hr event.

FIRST FLUSH: First Flush storage required is calculated in accordance with City of Scottsdale DSPM 4-1.201. Only the areas where runoff could be affected by vehicular contact are considered in the first flush calculation. The roof drainage is considered to be free of heavy traffic pollutants, therefore, on-site driveway areas and sidewalks will be considered for the calculation. As shown in the Proposed Conditions Cwt Exhibit, the first flush area is calculated as the total project area (386,053 sf) minus roof area (161,432 sf) and landscape areas (61,913 sf), equating to 162,708 sf.

$$FF_r = C\left(\frac{P}{12}\right)A$$

where:

FF_r = First Flush required storage volume (cf)

P = Precipitation amount = 0.5 in per C.O.S. DSPM

A = the applicable contributing area of the proposed development (sf)

C = The weighted average runoff coefficient = 0.95

$$FF_r = (0.95)\left(\frac{0.5}{12}\right)161{,}878 = 6{,}408\ cf$$

Since retention will be provided for the 100-yr, 2-hr event, the first flush requirement is automatically satisfied. Environmental structures will be provided as required to treat runoff prior to discharge.

4.4.1 CMP UNDERGROUND RETENTION TANK DESIGN (75-YR DESIGN LIFE)

Per the Geotechnical Investigation Report prepared by Vann Engineering, Inc dated June 20, 2024, it is suggested to design the CMP material type for how corrosive the soil is in contact with the pipe. Therefore, per Table 12 of the referred report above, the minimum gage for 120" Ø CMP and maximum cover ranging from 5.0 to 15.0 feet is 14 gage galvanized pipe.

4.5 STORMWATER DISCHARGE

For Basins with no direct bleed-off available, Drywells are proposed in the on-site storage facilities to dispose of the stormwater within thirty-six (36) hours. The calculation is as follows:

- Minimum percolating rate of a drywell (for planning purposes) = 0.1 cfs
- Volume to be drained in 36 hours = 0.1 cfs * 36 hours * 3600 sec/hour = 12,960 cf = 0.298 acre-feet.
- The number of drywells will be reduced if geotechnical testing for percolation rates determines adequate infiltration is available in the native soils at lower depths. If the percolation rate of the drywells is less than 0.1 cfs the number of drywells may have to be increased.

Basin A:
Total provided storage = **41,600** CF
41,600 CF / 12,960 CF per drywell = 3.21 = 4 drywells required.

Basin B:
Total provided storage = **25,870**CF
25,870 CF / 12,960 CF per drywell = 2.00 = 2 drywells required.

Pre vs post discharges

Proposed conditions will ultimately increase site flow contributions to the existing public storm drain system.
Table 7 below summarizes the project discharges per outfall for the 10-year and 100-year storm events, providing the differences between existing and proposed peak flows for each case.

TABLE 7: PRE VS POST SITE DISCHARGES

	Q10 (cfs)			Q100 (cfs)		
Outfall	Existing	Proposed	Δ	Existing	Proposed	Δ
EX-CB-1	3.73	3.62	-0.11	6.49	6.55	0.06
EX-CB-2	0.64	1.28	0.63	1.01	2.01	1.00

During the 100-year storm event, discharges to the overall public storm drain system will be increased by 1.00 cfs.

Refer to **Existing Conditions Drainage Area Map, Existing Conditions Cwt Exhibit, Existing Site Discharges Calculations** and **Proposed Conditions Drainage Area Map** in **APPENDIX II**.

4.6 PIPE CAPACITY CALCULATIONS

The proposed drainage system consists of HDPE and Class IV RCP pipes conveying runoff flows from proposed catch basins and roof drains to the underground storage tanks. Capacity of the storm system was evaluated for the 100-yr event scenario using Autodesk Civil 3D Gravity Network Analysis, verifying that the Hydraulic Grade line does not exceed six-inch depth in the parking lot.

Refer to **Appendix II** for **Pipe Capacity Calculations and Hydraulic Grade Profiles**.

4.7 STORM DRAIN INLET CALCULATIONS

Two (2) double 2'x3' concrete catch basin, six (6) 2'x3' Nyloplast catch basins and one (1) 24" Nyloplast catch basin are proposed to convey runoff to proposed retention. Two existing MAG 532 catch basins are along N. 78th Way, which capture off-site runoff.

- A double 2'x3' concrete catch basin can convey a flow of 13.50 cfs, while considering a clogging factor of 0.50 (27 cfs no clogging). The proposed catch basin inlets can adequately convey runoff for the maximum 100-year, 5-min event Q_{100} = 10.79 cfs (DA-A1).
- A 2'x3' Nyloplast catch basin can convey a flow of 6.75 cfs, while considering a clogging factor of 0.50 (13.50 cfs no clogging). The proposed catch basin inlets can adequately convey runoff for the maximum 100-year, 5-min event Q_{100} = 3.45 cfs (DA-A3).
- A 24" Nyloplast catch basin can convey a flow of 2.29 cfs, while considering a clogging factor 0.50 (4.58 cfs no clogging). The proposed catch basin inlets can adequately convey runoff for the maximum 100-year, 5-min event Q_{100} = 1.31 cfs (DA-B2).
- A MAG 532 can convey a flow of 7.00 while considering a clogging factor of 0.2 (80% passing). The existing catch basin inlet can adequately convey runoff for the maximum 100-year, 5-min event Q_{100} = 6.55 cfs (OFF-1).

Refer to **APPENDIX II** for Inlet Calculation Summary and **APPENDIX IV** for Inlet Capacity Charts.

4.8 ADEQ WATER QUALITY REQUIREMENTS

The total disturbed area of this site is approximately 8.86 acres. The Arizona Department of Environmental Quality requires that any site disturbance over an acre is required to submit an NOI. A NOI will be submitted to ADEQ for this site as this site disturbance is over 1 acre.

5. FLOOD SAFETY FOR DWELLINGS

5.1 FINISHED FLOOR ELEVATIONS

This project lies in an "X-Shaded" Flood Zone. Therefore, the proposed building finished floor elevation will be set a minimum of 14 inches above the lot ultimate outfall, located at the southwest corner of the site at an elevation of 1456.92, and 12" above adjacent high-water elevations.

6. CONCLUSIONS

6.1 OVERALL PROJECT:

1. The finished floor elevations will be designed a minimum of 14 inches above the low top of curb of the lot.
2. The historical outfalls will be affected at proposed conditions and overall discharge to the public storm drain system will be increased.
3. On-site storage facilities will be provided to account for the 100-yr 2-hr storm event volume.

6.2 PROJECT PHASING:

This project will be constructed in a single phase.

7. WARNING AND DISCLAIMER OF LIABILITY

GRADING & DRAINAGE LANGUAGE

WARNING AND DISCLAIMER OF LIABILITY

The City's Stormwater and Floodplain Management Ordinance is intended to minimize the occurrence of losses, hazards and conditions adversely affecting the public health, safety and general welfare which might result from flooding.

The Stormwater and Floodplain Management Ordinance identifies floodplains, floodways, flood fringes and special flood hazard areas. However, a property outside these areas could be inundated by floods. Also, much of the city is a dynamic flood area; floodways, floodplains, flood fringes and special flood hazard areas may shift from one location to another, over time, due to natural processes.

WARNING AND DISCLAIMER OF LIABILITY

The flood protection provided by the Stormwater and Floodplain Management Ordinance is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Floods larger than the base flood can and will occur on rare occasions. Floodwater heights may be increased by constructed or natural causes. The Stormwater and Floodplain Management Ordinance does not create liability on the part of the city, any officer or employee thereof, or the federal, state or county government for any flood damages that result from reliance on the Ordinance or any administrative decision lawfully made thereunder.

Compliance with the Stormwater and Floodplain Management Ordinance does not ensure complete protection from flooding. Flood-related problems such as natural erosion, streambed meander, or constructed obstructions and diversions may occur and have an adverse effect in the event of a flood. You are advised to consult your own engineer or other expert regarding these considerations.

I have read and understand the above.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

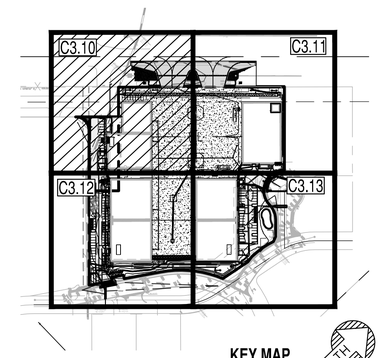
PRELIMINARY GRADING AND DRAINAGE PLAN

SCOTTSDALE, ARIZONA, 85260

A PORTION OF THE NORTHEAST QUARTER OF SECTION 11, TOWNSHIP 3 NORTH, RANGE 4 EAST OF THE GILA AND SALT RIVER MERIDIAN, MARICOPA COUNTY, ARIZONA.



PRELIMINARY GRADING NOTES

1. MATCH EXISTING GRADE.
2. 6" VERTICAL CURB AND GUTTER.
2A. 6" VERTICAL CURB
3. PROPOSED CONCRETE SIDEWALK. WIDTH PER PLAN.
4. LIGHT DUTY PAVEMENT.
4A. HEAVY DUTY PAVEMENT.
4B. HEAVY DUTY CONCRETE PAVEMENT
5. PAVEMENT WITH 2% MAXIMUM SLOPE IN ANY DIRECTION AT ACCESSIBLE PARKING STALLS AND 2% MAXIMUM CROSS SLOPE AT ADA ACCESSIBLE ROUTE.
6. PROPOSED ACCESSIBLE RAMP
8. NEW STORM MANHOLE.
9. PROPOSED HDPE PIPE.
9A. PROPOSED RGRCP PIPE
10A. PROPOSED UNDERGROUND CONCRETE VAULT STORMWATER STORAGE SYSTEM.
11. PROPOSED MAXWELL PLUS DRYWELL.
12. PROPOSED TEE.
19. PROPOSED STUB FOR ROOF DRAIN.
21. PROPOSED RISER WITH VENTED SOLID LID.
