1.0 INTRODUCTION AND SCOPE OF WORK

This report presents the results of a drainage study conducted by Site Consultants, Inc. (SCI) at the request of Investment Property Associates, LLC (client) for a new Senior Living facility located at northeast corner of Scottsdale Road and Pinnacle Peak Road (site) which lies north of the existing Crown West (Safeway) shopping center. The purpose of this report is to provide an analysis of the proposed site re-development's impact, if any, on the existing surrounding site developments off-site and on-site drainage patterns and existing on-site retention facilities

1.1 Scope of Work and Limitations

This report is focused on providing practical design information, evaluation, and calculations for statistical flood events up to and including the 100-year frequency flood. The procedures used herein are derived from, and performed with, currently accepted engineering methodologies and practices. Additionally, the criterion for this evaluation is designed to conform to currently applicable ordinances, regulations and policies affected by the appropriate jurisdictional regulatory authorities for the site.

The analysis presented herein focuses on developing design estimates of stormwater runoff resulting from a statistical evaluation of storm events of particular duration and frequency up to and including a 100-year frequency event. A storm event exceeding the 100-year frequency event may cause or create the risk of greater flood impact than is addressed and presented herein. However, the scope of this assessment does not include, neither did the client request, evaluation of stormwater runoff resulting from storm events exceeding the 100-year frequency event. Site Consultants, Inc. assumes no responsibility for actual flood damage, increased risks of flood damage, or increased construction or development cost resulting from or related to any such events. Nor shall SCI be responsible for any changes in or additions to, regulatory requirements that may result from, or be related to, any such events or changes in hydrologic or hydraulic conditions within the watershed.

In performing the services contained herein, SCI has or will receive information prepared or compiled by others. SCI as engineering professionals, are not required to verify the information, but may rely on the information unless actual knowledge concerning the validity of the information is known or is obvious to the professional. Therefore, SCI is entitled to rely upon the accuracy and completeness of this information without independent evaluation or verification.

1.2 Site Location

The approximately 4.5 net acres project is approximately located at the northeast corner of Scottsdale and Pinnacle Peak Road, north of the existing Crown West (Safeway) shopping center.

The subject property lies within the SW ¼ of Section 11, Township 4 North, Range 4 East, of the Gila and Salt River Base and Meridian, Maricopa County (MCR), Scottsdale, Arizona. The site is Parcel 'B' and a portion of Parcel 'A' of the Crown West Land Division Land Map, as recorded in the Bk. 857, Pg. 19, and MCR.

Residential subdivisions borders the site to the north and east; commercial developments borders the site to the south and west.

See Attachment No. 1 for Site Vicinity Map.

1.3 Existing Site Development Area Improvements

The site development area is currently developed as commercial office building development which functioned as the corporate headquarters for Giant Industries, Inc. Improvements included the commercial office building, parking garage and required utility infrastructure that connected to City's utility infrastructure in Scottsdale Road.

See Attachment No. 2 for existing ALTA/ACSM Land Title Survey.

The site development area is currently developed and is a portion of a larger as commercial office building development which functioned as the corporate headquarters for Giant Industries, Inc. Improvements included the commercial office building, parking garage and required utility infrastructure that connected to City's utility infrastructure in Scottsdale Road. The parent parcel has been subdivide and the redevelopment area is confined to the area occupied by the commercial office building and

1.4 Proposed Re-Development Area Description

The parent parcel for the original development has been divided into three parcels; the redevelopment area consist of two parcels located in the eastern portion of the said parent parcel. The said existing commercial office building is located within those parcels. The said parking garage is not located on the senior living parcel, it is located in the third parcel located west of the senior living facility.

The proposed site redevelopment will consist of the demolishing the said existing commercial office building and the construction of a new senior living facility that includes both a memory care wing and an independent living facility with associated amenities, ie. two outdoor courtyards and a dog park. Redevelopment will also include construction of associated utility infrastructure, permanent stormwater retention facilities, landscape areas and pedestrian connections to adjacent development to the west and south.

See Attachment No. 3 for "Site Plan".

1.5 Regulatory Jurisdiction

The criterion used in the drainage design and analysis of the site was established using the guidelines as described in the following:

- *Drainage Standards and Policies Manual for City of Scottsdale, dated, January 2010.* **(Reference 1).**

2.0 PHYSICAL SETTING

2.1 Existing Site Topography

As noted in Section 1.3 the proposed site redevelopment area is currently a development commercial office building. The site generally slopes from north-northeast (elevation 1875-feet) to south-southeast (elevation 1859.00-feet).

See Attachment No. 4 for development area topographic map.

3.0 DESCRIPTION OF EXISTING OFF-SITE STORMWATER RUNOFF

3.1 Off-Site: Regional Drainage:

Regional drainage is generally from north-northeast to south-southeast. The existing Giant Industries building project had not adjacent developments constructed north and northeast of the site.

See Attachment No. 5 for excerpt from Giant Industries Grading and Drainage plans.

Since there were no adjacent developments the Giant Industries project accommodated offsite flows form the north-northeast of the development.

See Attachment No. 6 for excerpt from Giant Industries Drainage Report.

The offsite flows are conveyed onto the site via wall opening in the perimeter CMU wall.

Currently the adjacent parcels located north-northeast, east and west of the site re-development have been developed or are under construction.

NORTH & EAST:

Premiere at Pinnacle Peak is a residential subdivision located to north and east of redevelopment area. Stormwater entering the site from the north are now being conveyed to Scottsdale Road via East Camino Del Monte (street) and concrete lined drainage channels. Stormwater from east is conveyed via subdivision streets into the Scottsdale Wash.

NORTHEAST:

Pinnacle Peak Villas is a residential subdivision located to northeast of redevelopment area. Stormwater previously entering the site from the northeast is now retained in existing on-site surface landscape retention basins. The landscape basins were sized based on a 100 yr – 1hr storm with and intensity of 2.45 and a weighted 'C' value of 0.35. The required retention volumes have been recomputed based on current NOAA14 data based on a 100yr – 2hr storm events with an intensity of 2.41 and a weighted 'C' of 0.35.

See Attachment No. 7 excerpt from drainage report for Pinnacle Peak Villas documenting the 100 yr -1 hr design storm / 2.45 'C' value / 0.35 Weighted 'C'

The landscape retention basin adjacent to the northeast corner of the site development area has a 100 yr – 2 hr storm event retention requirement of 6,404 cf and a highwater elevation of 1874.10. The existing wall opening located at the northeast corner of the redevelopment area, at the retention basin location is 1874.18 feet. Therefore, in the event of a 100-yr, 2 hr storm event the runoff is fully contained in the basin. In the event of a back to back 100 –yr, 2 hr storm event the highwater elevation of the basin is elevated to 1875.10 which provides for 1-foot of head above the invert of the existing wall opening.

See Attachment No. 16 for Pre vs. Post Q_{100} Run-off Calculations.

Note: Hydrology and Hydraulic Calculations based on: Hydra flow Extension for AutoCAD Civil 3D

5.2 Special Conditions – Finish Floor Determination

The proposed developments is located in FEMA Flood Zone 'AO". The proposed developments use will be restricted to senior living only; there will be no on-site surgery or emergency treatment facilities. Therefore based on FEMA Classifications of Structures; the proposed finish floor elevations for structures, located in FEMA Flood Zone 'AO', with no on-site surgery or emergency treatment facilities, are required to be 2-feet above the Highest Natural Grade. It is SCI's understanding that USGS Mapping, provides the best available data to document the Highest Adjacent Natural Grade (HAG).

See Attachment No. 20 for a letter from ownership stating development use is limited to senior living with no on-site surgery or emergency treatment facilities.

See Attachment No. 13 for proposed site development site plan overlaid on USGS Elevations.

Based on the mapping in Attachment No. 13 the Highest Adjacent Grade is located at the northeast corner of the Building 'A' and is 1871.83 –feet.

Therefore the finish floor elevation of Building 'A' will be 1871.83 feet + 2 feet = 1873.83 **used 1873.83 – feet.**

Due to the sloping terrain and the proximity to the neighborhood; the second building for the project development Building 'B', located at the southeast corner of the site was stepped.

Note: Buildings 'A' and Buildings 'B' are two completely independent structures.

Based on the mapping in Attachment No. 13 the Highest Adjacent Grade located adjacent to the northeast building corner of the Building 'B' is 1867.60 –feet.

Therefore the main floor elevation will be 1867.60 feet + 2 feet = 1869.60 **used 1869.83 – feet** to comply with FEMA single family housing administration development requirements.

6.0 DESCRIPTION OF PROPOSED OFF-SITE STORMWATER RUNOFF

6.1 Proposed Off-Site Hydrology – Redevelopment Area

As noted in **Section 3.1 NORTHEAST** above, there is a wall opening at elevation 1874.18 feet that is above the 100 yr – 2 hr storm event highwater elevation for the adjacent subdivision retention basin. However, in the event of a back to back 100 yr – 2 hr storm event the highwater elevation will rise to 1875.10 approximately 1-foot above the wall opening. At 1-foot of head approximately 2.2 cfs of water will be conveyed through the wall opening.

The offsite stormwater and on-site surface sheet flow in that area will be convey in the landscape drainage channel to the southeast corner of the site into the single catch basin. Assuming a depth of 0.5 feet the single catch basin (bleed off) has a capacity of 12.4 cfs which will dissipate the 7.82 cfs (computed based on a 50% clogging factor) of runoff being conveyed in the channel into the Crown West (Safeway) shopping center parking lot.

See Attachment 14 for Wall Opening / Open Channel

7.0 FLOOD ZONE INFORMATION

The Maricopa County, Arizona and Incorporated Areas Flood Insurance Rate Map (FIRM) map number 04013C1320L, dated October 16, 2013, indicates that the site falls within Zone 'AO'. Zone 'AO' is defined by FEMA as:

> "Special Flood Hazard Area" (SFHAs) subject to inundation by the 1% annual chance flood. Average Flood depth of 1 foot as determined per FIRM map. Velocities of 3-fps as determined on FIRM map.

See Attachment No. 15 for Firm Map.

8.0 SUMMARY AND CONCLUSIONS

1. Proposed grading design will safely convey stormwater runoff past the proposed site re-development area.
2. Stormwater runoff generated on-site will be directed to retention basin.
3. Finished floors for structures situated on the site will be established at an elevation that meets or exceeds the two foot minimum requirement above the Highest Adjacent Natural Grade as documented by USGS mapping.
4. Drainage patterns on and around the site will not be altered.
5. Building and mechanical equipment pads are to 1.0' above the Regulatory Flood Depth Elevation (R.F.D.) set at RFD Base

LEGAL DESCRIPTION (THIS CONSTRUCTION)

Lots 2, 6, 8, 9, 11 to 14, inclusive; 17 to 24, inclusive, 30, 37, 38, 41, 42, 43, 45 to 59, inclusive, and Tracts A to F, inclusive, PINNACLE PEAK VILLAS, according to Book 312 of Maps, page 18, Records of Maricopa County, Arizona.

NOTES TO CONTRACTOR

1. This Plan has been prepared to indicate grading requirements due to new flood regulations being imposed by the City of Scottsdale. Also to show retention basin modifications and locate new retaining wall construction.
2. The plan shows the finished grade of fill necessary to raise the finish floor elevation above new flood plain requirements.
3. Certain lots on this site are owned by individuals other than the developer shown on this sheet. These lots are to remain as is and are not part of this construction.
4. Lots 38, 46, 47, and 48 existing pad elevations meet the new flood requirements and do not require fill. Finish floor elevations should be constructed to the grades shown on this plan. Fine grading of the finished pad will be necessary for proper drainage.
5. Construction of retaining walls with proper method of backfilling is required as shown on details on sheet 6.
6. During construction, contractor is required to maintain dust control, provide barricading if required, provide street cleanup, and repair any damage to existing landscaping, walls, curb and gutter and sidewalk, water and sewer services, electric and telephone systems, cable T.V. systems and asphalt.
7. Tracts A, B, D, E & F are to remain undisturbed and will not be part of this construction.
8. Contractor is responsible to obtain soil testing of native and imported soils for compaction requirements. Earthwork is to conform to testing recommendations.
9. Contractor is to provide pad compaction certifications as part of this project. This firm will provide grade certification. All lots are to meet compaction and grade requirements before contractor is released from contract.
10. Contractor is to provide construction staking and resetting of missing property corners as part of this contract.
11. Contractor is to ma[illegible] evidence of existing utilities during construction i.e. w[illegible] and sewer tap markers, J-Box, transformers and cable T.V.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

ENGINEERS CERTIFICATION:

THE LOWEST FLOOR ELEVATION(S) AND/OR FLOOD PROOFING ELEVATION(S) ON THIS PLAN ARE SUFFICIENTLY HIGH TO PROVIDE PROTECTION FROM FLOODING CAUSED BY A 100-YEAR STORM, AND ARE IN ACCORDANCE WITH SCOTTSDALE REVISED CODE, CHAPTER 37 - FLOODPLAIN AND STORMWATER REGULATION.

THE TWO BUILDINGS ARE STRUCTURALLY INDEPENDENT AND COMPLY WITH FEMA'S STRUCTURAL INDEPENDENT DEFINITION.

DRAINAGE NOTE

THE PAD ELEVATIONS OF ALL NEW A/C AND/OR ELECTRO-MECHANICAL UNITS WILL BE SET AT OR ABOVE RFE TO PROVIDE FLOOD PROTECTION UNDER THE 100 YEAR STORM EVENT.

HIGHEST ADJACENT GRADE/FINISH FLOOR ELEVATION

MINIMUM FINISH FLOOR ELEVATION FOR NORTHERN BUILDING IS BASED ON HIGHEST ADJACENT GRADE (HAG) LOCATED AT NORTHEAST CORNER OF BUILDING,. HAG ELEVATION IS 1871.83 FEET, THEREFORE FINISH FLOOR ELEVATION IS 1873.83 (1871.83 + 2 = 1873.83 FEET).

MINIMUM FINISH FLOOR ELEVATION FOR SOUTHERN BUILDING IS BASED ON HAG LOCATED AT NORTHEAST CORNER OF THE BUILDING. HAG ELEVATION IS 1867.40 FEET, THEREFORE MINIMUM FINISH FLOOR ELEVATION IS 1869.40 (1867.40 + 2=1869.40 FEET), HOWEVER, DUE TO CONSTRUCTION CONSTRAINS USE 1869.86 ELEVATION.

AS-BUILT CERTIFICATION

I HEREBY CERTIFY THAT THE AS-BUILT IMPROVEMENTS AS SHOWN HEREON ARE LOCATED AS NOTED, AND THE LOCATIONS ARE CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF.

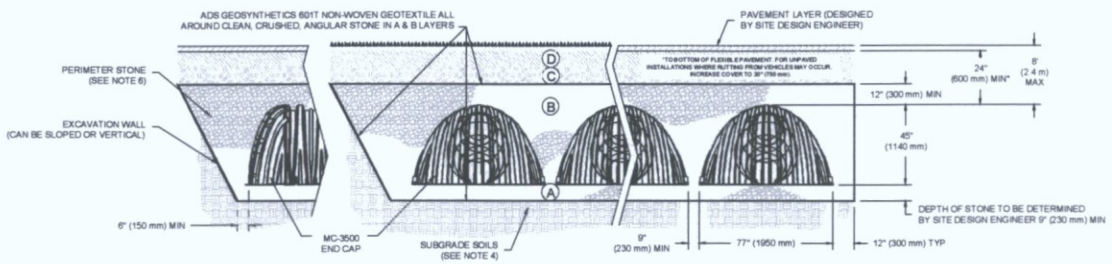
PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.



NOTES:

1. MC-3500 CHAMBERS SHALL CONFORM TO THE REQUIREMENTS OF ASTM F2418 "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".

3. "ACCEPTABLE FILL MATERIALS" TABLE ABOVE PROVIDES MATERIAL LOCATIONS, DESCRIPTIONS, GRADATIONS, AND COMPACTION REQUIREMENTS FOR FOUNDATION, EMBEDMENT, AND FILL MATERIALS.
4. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.

City of Scottsdale Project No. 30-DR-2016

Mr. Baronas:

Pursuant to your request this letter has been prepared to document the type of occupancy for the above referenced project.

"Senior Living at Scottsdale Road and Pinnacle Peak Road" is located at the Northeast corner of Scottsdale Road and Pinnacle Peak Road and consists of a senior living facility that includes both a memory care wing and an independent living facility with associated parking, landscape areas, pedestrian connections and amenities such as a dog park and outdoor courtyards.

"Senior Living at Scottsdale Road and Pinnacle Peak Road" will assist residents with daily living activities and basic care support in an apartment setting. The facility will offer recreational and social activities, housekeeping, linen service, apartment maintenance and transportation, while trained caregivers will provide assistance with daily tasks such as medication. Staff will coordinate services with outside healthcare providers and monitor residents to ensure they are healthy. No nursing, surgery or emergency treatment functions will be performed at the facility.
