## 1. EXECUTIVE SUMMARY

Mercado Courtyard proposes to rezone 6.06 acres of commercial property land located south and east of the Shea Boulevard and 92nd Street intersection. More generally the site lies south of the Sprouts shopping center.

Existing structures will be razed making way for a new high-density residential facility with 273 units. The building will have a central at-grade parking garage and rise to five floors.

The western portion of the property is presently zoned PUD; the eastern lot is zoned C-O PCD.

Located within the City of Scottsdale corporate boundary, this site will receive wastewater service from the City of Scottsdale by a 6" service connection to the existing 8" PVC sewer line fronting the site along in N. 92nd Street.

Onsite sewer improvements will only consist of the private service connection complying with the most recent City of Scottsdale and Maricopa County Environmental Services Department design standards and policies.

## 2. INTRODUCTION

### 2.1 PLAN OBJECTIVE:

The purpose of this report is to provide information and calculations supporting the sewer system design. Preparation of this report has been done in accordance with Chapter 7 of the City's design manual<sup>2</sup>.

### 2.2 SITE LOCATION

The 6.06-acre subject property consists of four contiguous parcels whose APN's are:

- 217-39-535, -536 and -537
- 217-36-989B

The Site is bounded by:

- N. 92<sup>nd</sup> Street on the west
- The Sprouts shopping center on the north
- A parking area and cleared area to the east (a proposed 9400 Shea residential project)
- Medical office development to the south

Refer to **FIGURE 1** for a vicinity map.

### 2.3 EXISTING SITE DESCRIPTION

The western portion of the site is developed with two commercial buildings and parking. The eastern lot is open undeveloped land with some scrub vegetation. The property gently slopes to the southwest at approximately 0.7%. Refer to **FIGURE 2** for an aerial of the site and **FIGURE 3** for an ALTA.

## **2.4 PROPOSED DEVELOPMENT**

Once cleared the site will be graded and developed for a story high-density residential building consisting of 273 units. The building will envelope an at grade parking structure and pool recreation area. Refer to **APPENDIX I** for the Preliminary Site Plan.

## **3. DESIGN DOCUMENTATION**

### **3.1. DESIGN COMPLIANCE:**

All sewer improvements will be designed and constructed to the most recent Plumbing Codes and the City of Scottsdale and MCESD design standards and policies.

### **3.2. SOFTWARE ACKNOWLEDGEMENT:**

Sewer pipe capacity calculations utilize Bentley® FlowMaster® V8i (SELECTseries 1) software.

## **4. EXISTING INFRASTRUCTURE**

### **4.1. EXISTING UTILITIES:**

An 8" PVC sewer runs along the site's frontage to 92<sup>nd</sup> Street and an 8" VCP sewer parallels it under the northbound lane of 92<sup>nd</sup> Street. Refer to **FIGURE 4** for the City's Sewer Q-S Maps showing the local service area north of Via Linda. Coordination of all dry utility needs are being coordinated with the respective agencies.

### **4.2. SEWER FLOW MONITORING:**

RDH Environmental monitored flows in an 8" pipe under 91<sup>st</sup> Street just north of Via Linda Drive from June 24 to July 7, 2021. The summary included in **APPENDIX IV** shows a maximum flow of 117.5 gpm and an average flow of 50.6 gpm. Velocities ranged from 1.3 fps to 3.0 fps with an average of 2.3 fps.

## **5. PROPOSED CONDITIONS**

### **5.1. PROPOSED SEWER SYSTEM:**

The 6" sewer service line will connect to an service stub on the 8" PVC line located at southwest of the site. All existing sewer service lines to the site will be removed and plugged per City requirements. Refer to **APPENDIX II** for the Preliminary Utility Plan.

### **5.2. MAINTENANCE RESPONSIBILITIES:**

The onsite 6" sewer service will be private; owned, operated and maintained by the owner. All existing public sewers are located within rights-of-ways or dedicated easements and is maintained by the City.

### 5.3. SEWER DEMANDS:

**Table 1: SEWER DEMANDS**

	Avg. Day Demand (gpd)	Units	Peaking Factor
Office	0.4	Per sq. ft.	3.0
High Density Residential	140.0	Per Unit	4.5
Pool Backwash	144,000.0	Per Pool	n/a

**Table 2: HISTORIC ONSITE SEWER DEMAND CALCULATIONS**

	Area (sf)	Avg. Day Demand (gpm/sf)	Peaking Factor	Avg. Day Demand (gpd)	Avg. Day Demand (gpm)	Peak Demand (gpm)
Office	58,048	0.4	3.0	23,219	16.1	48.4
Office	14,480	0.4	3.0	5,792	4.0	12.1
Totals				29,011	20.1	60.4

**Table 3: PROPOSED ONSITE SEWER DEMAND CALCULATIONS**

	Units	Avg. Day Demand (gpm/unit)	Peaking Factor	Avg. Day Demand (gpd)	Avg. Day Demand (gpm)	Peak Demand (gpm)
Residential	273	140.00	4.5	38,220	26.5	119.4
Pool Backwash	1	100.00	n/a	144,000	100.0	100.0
Totals				182,220	126.5	219.4

The above tables indicate the proposed high-density residential project will increase the historical average day flow to the 92<sup>nd</sup> Street sewer by 6.4 gpm (26.5 – 20.1) and peak flow demand by 59 gpm (119.4 – 60.4). Additionally, a 100-gpm pool backwash allowance is to be included in the capacity calculations.

### 5.4. VARIANCE FROM STATED DESIGN FLOWS:

No variance from the stated design flows is requested for this project.

### 5.5. SEWER CAPACITY CALCULATIONS

For comparative purposes, Table 4 represents the offsite sewer demand from only the shopping center to the north as evaluated using floor areas listed on the Maricopa County Assessor's Parcel Viewer site along with the DS+PM unit demands. The combined peak flow from just the shopping center is approximately 1 ½ times (177.8 gpm vs. 117.5 gpm) the flow monitored for the entire service area prior to connection with the 15" VCP in Via Linda Drive. The hydraulic calculations shown in APPENDIX III will use the monitored flow results plus the calculated demands from Table 3 above for the peak flow with and without the pool backwash.

The shopping center is not the only area that utilizes the 8" sewer in 92nd St. Might want to eliminate this section

**Table 4: EXISTING OFFSITE SEWER DEMAND CALCULATIONS (north of the site)**

	Area (sf)	Avg. Day Demand (gpm/sf)	Peaking Factor	Avg. Day Demand (gpd)	Avg. Day Demand (gpm)	Peak Demand (gpm)
Commercial/Retail	83,108	0.5	3.0	41,554	28.9	86.6
Restaurant	18,245	1.2	6.0	21,894	15.2	91.2
			Totals	63,448	44.1	177.8

## 5.6. SEWER SYSTEM ANALYSIS:

APPENDIX III shows the proposed sewer hydraulic calculations for the 6" service line and the 8" VCP line at 91<sup>st</sup> Street prior to connecting with the trunk line in Via Linda Drive.

The 6" service line will have sufficient capacity at 2% slope to convey the site's peak demand including the pool backwash.

The 8" VCP sewer line at 0.004'/' slope has sufficient capacity to convey the 236.9 peak flow from the service area with a 2.36 fps velocity and d/D = 0.61. Adding a 100-gpm pool backwash increases the velocity to 2.5 fps and d/D to 0.80.

## 6. SUMMARY

### 6.1. SUMMARY OF PROPOSED SEWER IMPROVEMENTS:

Sufficient city sewer capacity is available in the 8" PVC line adjacent to the site and south to the sewer trunk line in Via Linda Drive meet the proposed peak flow.

### 6.2. PROJECT SCHEDULE:

Infrastructure for this project is anticipated to be constructed in a single phase.

**SL1122 RDH Flow Study, 1 site in Scottsdale, AZ Thursday, 06-24-21 to Wednesday 07-07-21.**

**Equipment for Site:** Hach 901 Logger with Flo-Dar Sensor (Area Velocity).

The equipment was installed on 6/24/21 with confined space entry, pipe size confirmed, sensor calibrated with 10-inch target and level depth confirmed to the flow level.

Duration of monitoring: 9-days including two weekends.

Monitor: Flow (gpm), Level (in), and Velocity (fps)

Data logging: 5 minutes intervals (No averaged intervals)

**Manhole located on North 91<sup>st</sup> St., off E. Via Linda**

60" Diameter, Rim to Invert: 115.00 inches

8" VCP pipe, flowing south

The pipe condition was intact and in good shape

Scum line of 2.75 inches

Flo-Dar installed pointing upstream in the 8" pipe channel

Flow data is valid having no missing, erroneous, or anomalies with data.

Attached is a summary showing Level, Velocity and Flow, and raw data in Excel, logged at 5-minute intervals, during the monitoring period.
