DEVELOPMENT REVIEW BOARD
REGULAR MEETING MEMORANDUM

Item No. 6
Meeting Date: October 15, 2020
Topic: Public Comment for case 28-DR-2020 (Axon)
From: Greg Bloemberg, Senior Planner
Through: Brad Carr, AICP, LEED-AP, Development Review Board Coordinator

---

Background

Development Review Board,

At the time the Development Review Board Report was being written for this proposal, staff had received very little public comment. Since the publishing of the Report, staff has received numerous emails from residents of the Stonebrook II community located southwest of the proposed Axon building. Staff is providing that correspondence (attached to this memo) as an addendum to the published staff report.

Greg Bloemberg
Senior Planner

Hello Mr. and Mrs. Abele,

Thank you for emailing Mayor Lane and the City Councilmembers and for taking the time to share your input prior to the November 10th City Council meeting. Senior Planner Greg Bloemberg is copied on this email and will make sure your comments are included in the case file and is also the best resource should you have any questions on this project.

⚠ External Email: Please use caution if opening links or attachments!

Dear members of the Scottsdale Planning Department, the Scottsdale Planning Commission, and the Scottsdale City Council:

I am writing to express my deep concern about the Axon proposed development (13- ZN-2020 and 2S-DR-2020) in Crossroads East, which abuts our residential community. This proposal as it stands leaves us with many serious concerns, specifically:

1) Traffic impacts and road redesigns: The impacts to us could be dramatic. There needs to be a traffic study.
2) Noise impacts: The noise impacts to our community could be substantial. There needs to be a noise study.
3) Building design: The design of the proposed building is objectionable. The request for a 7-story variance is obtrusive and likely will obstruct our view of the McDowell Mountains. An elevation analysis of this last item is needed.
4) Environmental impacts. There needs to be an environmental impact study that addresses emissions, groundwater, project discharges, and any odors.
5) Light pollution: the lighting impacts to our community are substantial and will negatively affect the enjoyment of our homes and community. There needs to be a lighting review and light pollution study.

This proposal as it stands requires a greater analysis by the city and more transparency by the developer. It should be noted that while our community, Scottsdale Stonebrook II, is the ONLY residential single-family home community affected by this proposal, there is no mention of considerations in the proposal that would speak to the issues above nor have they contacted any community representative.

Please take another look at what this proposal suggests and how it might negatively impact our community. It deserves more time for review, revision, and studies.

Thank you very much for your consideration.

Sincerely,
Carrah and Steve Abele

Subject: Re: City cases 13-ZN-2020 and 2S-DR-2000.

Thanks for the help.

Few extra notes...
1. Not opposed to the project, it will be nice to have some more development behind our neighborhood. Just not a fan of the additional two floors. Five floors plus screening for roof equipment is getting very tall compared to existing in the area. Also assuming the building pad will have to be raised for flood requirements. Was ok with the height of Nationwide, but did not like the building pad being raised as much as it was. Building pushed pretty far east, which is nice, but it won't be long before they expand and we end up with another Axon building further west behind the neighborhood if approved for 5 floors.
2. Preferred previous master plan with Perimeter Drive being extended through this site and connecting to the new Mayo Blvd on east side of Hayden. Helped push traffic away from our neighborhood. Proposed design dumps all of Axon traffic heading to west to Hayden/west bound 101 onto Mayo and through a new roundabout connecting to our neighborhood. Traffic on existing Mayo Blvd heavy in morning and backs up in evening as it is with the existing Axon campus and other businesses in the Perimeter Center.
3. Be nice to see access to Hayden directly from Axon campus vs running traffic down to Mayo Blvd.
4. Assuming the manf. portion of the project will run nights and/or split shifts, which will increase traffic at certain normally off-hours (nights/weekends/etc). So better to push traffic away from the neighborhood.
5. Very modern building, I am sure SmithGroup will do a great job once they get going with full design docs, but building a bit flashy compared to existing architecture in Perimeter Center. Very bright colors.
6. Would like to see the future fire station further north towards 101, though I suspect it will still be loud when they go on calls.

thx
Chris

Subject: Proposed Axon development
Importance: High

This project is a BAD idea. It is an infringement on our privacy and the serenity of our neighborhood. The land directly north of Scottsdale Stonebrook II from 82nd Street (east) to Hayden Rd (west) and Mayo Blvd (north) to the 101 Freeway should be zoned for RESIDENTIAL ONLY.

The area from 82nd Street east to the 101 South Loop and north of Mayo boulevard would stay zoned for commercial business but with height restrictions, light restrictions and noise restrictions.

Thank you for your consideration.

Lisa Kotler
Remember to laugh everyday!

Resident of Scottsdale Stonebrook II since 1998.

4) Environmental impacts. There needs to be an environmental impact study that addresses emissions, groundwater, project discharges, and any odors.

5) Light pollution: the lighting impacts to our community are substantial and will negatively affect the enjoyment of our homes and community. There needs to be a lighting review and light pollution study.

This proposal as it stands requires a greater analysis by the city and more transparency by the developer. **It should be noted that while our community, Scottsdale Stonebrook II, is the ONLY residential single-family home community affected by this proposal, there is no mention of considerations in the proposal that would speak to the issues above nor have they contacted any community representative.**

Please take another look at what this proposal suggests and how it might negatively impact our community. It deserves more time for review, revision, and studies.

Thank you very much for your consideration.

Sincerely,

Signed 
Date 10/12/2020

Dear members of the Scottsdale Planning Department, the Scottsdale Planning Commission, and the Scottsdale City Council:

I am writing to express my deep concern about the Axon proposed development (13-ZN-2020 and 2S-DR-2020) in Crossroads East, which abuts our residential community. This proposal as it stands leaves us with many serious concerns, specifically:

1) Traffic impacts and road redesigns: The impacts to us could be dramatic. There needs to be a traffic study.

2) Noise impacts: The noise impacts to our community could be substantial. There needs to be a noise study.

3) Building design: The design of the proposed building is objectionable. The request for a 7-story variance is obtrusive and likely will obstruct our view of the McDowell Mountains. An elevation analysis of this last item is needed.

4) Environmental impacts. There needs to be an environmental impact study that addresses emissions, groundwater, project discharges, and any odors.

5) Light pollution: the lighting impacts to our community are substantial and will negatively affect the enjoyment of our homes and community. There needs to be a lighting review and light pollution study.

This proposal as it stands requires a greater analysis by the city and more transparency by the developer. **It should be noted that while our community, Scottsdale Stonebrook II, is the ONLY residential single-family home community affected by this proposal, there is no mention of considerations in the proposal that would speak to the issues above nor have they contacted any community representative.**

Subject: Re: Protest of Axon zonning change

Thank you for the clarification and follow up. What I meant is that our neighborhood only has one access point in and out of the neighborhood onto 82nd Street. We do have 2 exits at Michelle and Teresa onto 82nd Street. The concern is the dependence on 82nd Street. Additional development and traffic planning should take into account how they affect traffic flow on 82nd Street. If we had an access point into our neighborhood from the North, South or West as well it wouldn't make our neighborhood as concerned about these traffic changes and the how the planned roundabout at 82nd and Mayo will affect 82nd Street.
Thank you!

>
> There are actually two access points from the Scottsdale Stonebrook subdivision to 82nd Street, not one – Michelle Drive and Theresa Drive. These intersections will remain in place with the planned street improvements associated with the Axon development. As part of the improvements required, there will be a roundabout installed at the 82nd Street and Mayo Boulevard intersection and a traffic signal at the Mayo Boulevard and Hayden Road intersection. These will make it easier to access Hayden Road. The Mayo Boulevard street connection from 82nd Street to Perimeter Drive will remain as an alternative route to accessing directly onto Princess Drive. Our Traffic Engineering staff did a traffic signal warrant analysis at 82nd Street and Princess Drive and the traffic volumes did not meet the necessary warrants. With the new street system in place Traffic Engineering will reevaluate the intersection to see if it will meet the warrants to justify installing a traffic signal. Feel free to contact us if you have any questions or concerns about the changes to the streets in the Scottsdale Stonebrook area.

Subject: RE: Protest of Axon zonning change

Thank you Mr. Bloemberg –

I would like to request that further study is done for the impact these proposed changes will have on 82nd Street and accessibility for the Scottsdale Stonebrook II neighborhood.

Residents of Scottsdale Stonebrook II have only one egress from the neighborhood onto 82nd Street. This is very poor planning for emergency purposes. During the 2019 Phoenix Open, 82nd Street and Mayo Blvd were completely blocked at times with lines of uber drivers accessing the birds nest and pick up areas. I witnessed neighbors driving in the oncoming traffic lanes to access entrance to the neighborhood and feared that I would not be able to get emergency help in or out should we need it. This was addressed and managed better in 2020 and we appreciate that.

Residents heading north or south on 82nd Street also contend with the unsafe intersection of Princess and 82nd Street. I understand it was studied recently and deemed that stop signs or a stoplight would impede the plan of traffic flow heading east/west on Princess Drive to Hayden and further access to the 101 to the North or to FLW/Greenway Hayden Loop to the South. People speed through on Princess Drive and the sightlines to the east and west already make it a difficult intersection to pass through. The elderly, newly licensed teens and visitors the area seem to have the most trouble with this intersection. The additional traffic these nearby developments will bring will increase the danger for drivers and pedestrians.

Given the planned changes to the north end of 82nd Street, to Mayo Boulevard which is our neighborhood's access to the 101 West and additional traffic Axon and the new apartment complex will bring to the area, I would like to request that the interest and safety of drivers in Scottsdale Stonebrook II is served in all decisions made.

Thank you –

Subject: Protest of Axon zonning change

Dear Mr. Bloemberg:

As a resident of Scottsdale Stonebrook II since 1996, I am appalled that the City of Scottsdale is planning on changing Zoning so a 7 story building can be built by Axon. In addition to increased traffic, the plans call for elimination of one of the few access points Mayo blvd. for our neighborhood. Proposed we have to travel through multiple traffic circles, traveling North and West to reach Hayden Loop. I current travel 1 city block to reach that know. This is a road I am my fellow neighbor use on a daily basis.

This is also a concern about the extra traffic traveling south bound on 82nd street to a very dangerous intersection Princess and 82nd Street. With no new traffic light and triple the traffic this is a death trap in the making.

Please vote NO to the AXON zoning request.

Sincerely;

Donovan Zimmerman,
Stonebrook II HOA Vice President

Dear members of the Scottsdale Planning Department, the Scottsdale Planning Commission, and the Scottsdale City Council:

I am writing to express my deep concern about the Axon proposed development (13-ZN-2020 and 2S-DR-2020) in Crossroads East, which abuts our residential community. This proposal as it stands leaves us with many serious concerns, specifically:

1) Traffic impacts and road redesigns: The impacts to us could be dramatic. There needs to be a traffic study.

2) Noise impacts: The noise impacts to our community could be substantial. There needs to be a noise study.

3) Building design: The design of the proposed building is objectionable. The request for a 7-story variance is obtrusive and likely will obstruct our view of the McDowell Mountains. An elevation analysis of this last item is needed.

4) Environmental impacts. There needs to be an environmental impact study that addresses emissions, groundwater, project discharges, and any odors.

5) Light pollution: the lighting impacts to our community are substantial and will negatively affect the enjoyment of our homes and community. There needs to be a lighting review and light pollution study.

This proposal as it stands requires a greater analysis by the city and more transparency by the developer. **It should be noted that while our community, Scottsdale Stonebrook II, is the ONLY residential single-family home community affected by this proposal, there is no mention of considerations in the proposal that would speak to the issues above nor have they contacted any community representative.**

Please take another look at what this proposal suggests and how it might negatively impact our community. It deserves more time for review, revision, and studies.

Thank you very much for your consideration.

Sincerely,

Signed Christopher Green

Date October 13, 2020

DEVELOPMENT REVIEW BOARD
REPORT

Meeting Date: October 15, 2020
General Plan Element: *Character and Design*
General Plan Goal: *Foster quality design that enhances Scottsdale as a unique southwestern desert community.*

ACTION

Axon **28-DR-2020**	Request by applicant for approval of a site plan, building elevations and landscape plan for a +/- 400,000 square foot corporate office and manufacturing building on a +/- 60-acre site located at the southeast corner of N. Hayden Road and the Loop 101 highway.

SUMMARY

Staff Recommendation

Approve, subject to the attached stipulations

Key Issues

- Iconic building design
- Illuminated private art elements included in design
- Retains a key employer in Scottsdale and provides room for growth and expansion of event operations

Items for Consideration

- Conformance with Development Review Board Criteria
- Integration of Sensitive Design Principles
- Consistency with Character and Design Element of the Greater Airpark CAP
- No community input received as of the date of this report

BACKGROUND

Location: Southeast corner of Hayden Road and Loop 101

Zoning: Planned Community District (P-C)

Adjacent Uses

North: Loop 101 Freeway
East: Loop 101 Freeway
South: Office/Light Industrial
West: Vacant

Property Owner
Arizona State Land Department

Applicant
Smithgroup

DEVELOPMENT PROPOSAL

This proposal is consistent with the Zoning Ordinance as well as the Character and Design element of the General Plan, and the Greater Airpark Character Area Plan (GACAP), which designates the site as Employment. The building design is a departure from traditional architecture in the Airpark area, and reflects the desire by the applicant to construct an iconic and unique addition to the area. Development south of Loop 101 is somewhat eclectic and is a good fit for a building that is "out of the norm."

The site plan proposes a combination 5-story office and single-story manufacturing building. Two access points from E. Mayo Boulevard are proposed, one serving as the main entrance to the site, the other a secondary access point for refuse collection, shipping and deliveries. The proposed building presents a unique form and color combination, designed to resemble a "starship" from the movie Star Wars, including an "observation deck" on the north-facing elevation intended to resemble a similar deck in the movie. Concrete tilt panels at the base of the office component, a metal panel exoskeleton and high-performance glazing make up a majority of the building facade. To further resemble a "starship", building design includes an illuminated art feature at the "nose" of the building that will utilize a series of swirling LED light fixtures to resemble a weapon charging. The remainder of the site is devoted primarily to surface parking, landscaping and open space. The proposed landscaping features drought-tolerant and desert-appropriate plant material including many species of native plants.

Development Review Board Criteria

Staff confirms that the development proposal generally meets the applicable Development Review Board Criteria. For a detailed analysis of the Criteria, please see Attachment #14.

STAFF RECOMMENDED ACTION

Staff recommends that the Development Review Board approve the Axon proposal per the attached stipulations, finding that the Development Review Board Criteria have been me

SENATE CONCEPTUAL ELEVATIONS

THERE IS A DESIRE AS AXON AND THE CAMPUS GROWS TO HAVE A SPACE THAT CAN FACILITATE LARGE SOCIAL EVENTS, PRESENTATIONS, STAFF EVENTS AND CELEBRATIONS. THE SENATE IS CONCEIVED AS A MULTI-TIER FUTURSITC FORM THAT CAN BE BUILT IN PHASES TO ACCOMMODATE THESE FUNCTION DURING AXON'S GROWTH.

PHASE: BASE

PHASE 2

PHASE 3

PHASE 4

SENATE CONCEPTUAL PHASING

THE SENATE CONCEPT ALLOWS PHASED GROWTH TO RESPOND TO THE AXON CAMPUS' NEEDS. THE FIRST PHASE: **BASE** IS THE TIERED, LANDSCAPED PLAZA IN THE INITIAL BUILD. THIS PLAZA MAY INCORPORATE THE INITIAL CONCRETE MONOLITHS, **PHASE 2** THAT COULD HAVE TENSILE SHADE FABRIC STRETCHED BETWEEN THEM (**PHASE 3**)TO CREATE A SERIES OF SHADED OUTDOOR SPACES FOR STAFF AND EVENTS. THE NEXT PHASE, **PHASE 4**, COULD ENTAIL THE ADDITION OF A SECOND LEVEL STRUCTURE TO ACCOMMODATE INCREASED CAPACITY, AND ULTIMATELY THE FULL FUTURISTIC FORM CLAD IN METAL PANEL TO MATCH THE FIRST BUILDING WOULD BE THE **FINAL PHASE**.

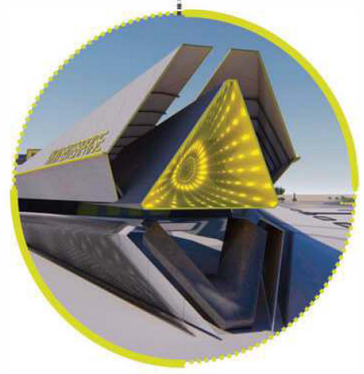
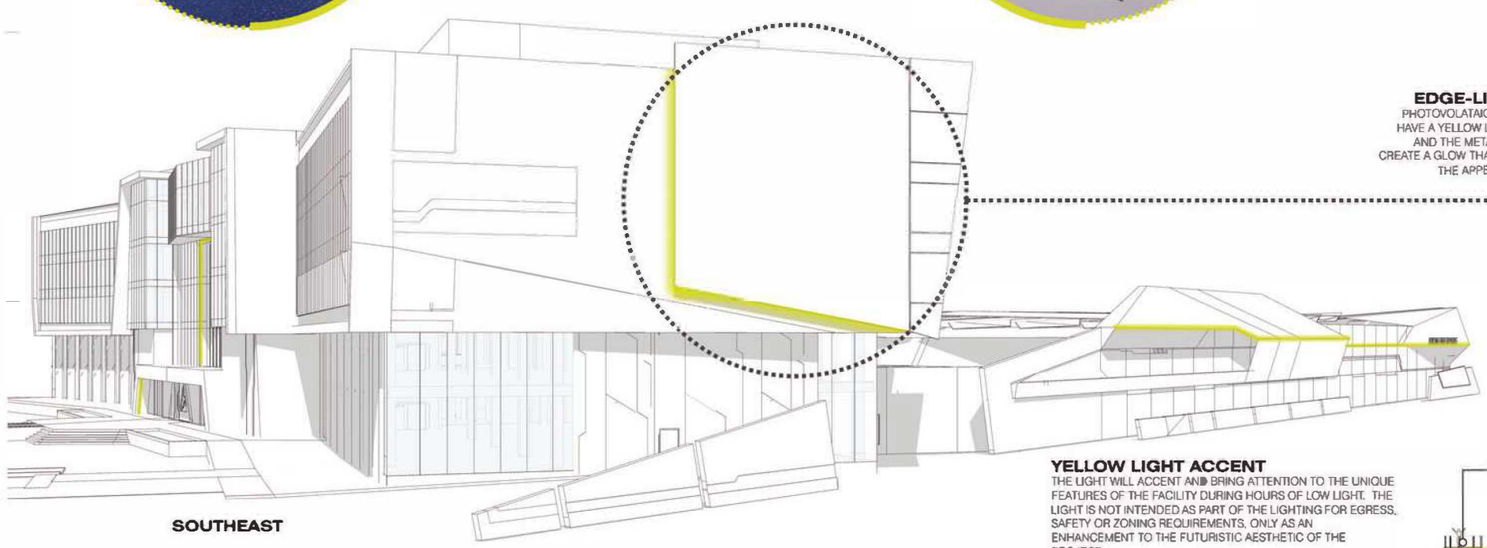
ENTRY PORTAL
MAIN ENTRY OF BUILDING IS FRAMED WITH A PERIMETER OF YELLOW LIGHT ACCENTING THE SHAPE AND ASSISTING WITH WAYFINDING. THE FRAMED VIEW THROUGH THE GLASS ABOVE ALLOWS A GLIMPSE OF THE CENTERPIECE STAIR IN THE 5 LEVEL LOBBY.



WAVE MOTION FEATURE
THE INTERIOR SURFACES OF THIS FEATURE WILL BE A VIDEO WALL OF DIRECT VIDEO SCREENS. THIS IS THE SAME TECHNOLOGY USED IN DIGITAL BILLBOARDS ALONG THE HIGHWAY. THIS WILL ALLOW IT TO HAVE CHANGING LIGHT AND SWIRLING EFFECTS. THERE IS NO PROJECTED LIGHT FROM THIS AND THE BRIGHTNESS LEVEL (NITS) GUIDELINES FOR DIGITAL BILLBOARDS TO DETERMINE BRIGHTNESS LEVELS THAT WILL BE APPROPRIATE IN THIS LOCATION.

OVERLOOK
THE PORTAL AND OVERLOOK OFFER A CHANCE AT FANTASTIC VIEWS OF THE AZ LANDSCAPE TO THE NORTH AS WELL AS A SUBTLY LIT AXON ICON ON THE ROOFTOP GATHERING SPACE



EDGE-LIT PHOTOVOLTAIC PANELS
PHOTOVOLTAIC ARRAY ON EAST AND WEST FACADES WILL HAVE A YELLOW LIGHT IN THE REVEAL BETWEEN THE PANELS AND THE METAL PANEL SKIN OF THE BUILDING. THIS WILL CREATE A GLOW THAT WILL ACCENT THE SHAPE AND GIVE THEM THE APPEARANCE OF FLOATING ABOVE THE FACADE.

YELLOW LIGHT ACCENT
THE LIGHT WILL ACCENT AND BRING ATTENTION TO THE UNIQUE FEATURES OF THE FACILITY DURING HOURS OF LOW LIGHT. THE LIGHT IS NOT INTENDED AS PART OF THE LIGHTING FOR EGRESS, SAFETY OR ZONING REQUIREMENTS, ONLY AS AN ENHANCEMENT TO THE FUTURISTIC AESTHETIC OF THE PROJECT

Specifications

Fixture Housing - Made from high pressure die cast, low copper aluminum alloy.

Gasketing - Continuous molded silicone gasket provides weatherproofing, dust and insect control at all luminaire connections.

Fitter - Part of upper aluminum housing for direct connection to standard Ø 2 ⅛" (60mm) short and long arms, as well as specially designed die cast pole adapter.

LED Array - LEDs mounted to PC boards and directly attached to upper aluminum housing for maximum LED performance and life. For future upgrades, light engine can be removed without tools.

LED Optics - High precision injection molded cross-beam technology reflectors are vacuum metallized. IDA approved "Dark Sky Friendly" at 0° Mounting.

LED Driver - LEDs are driven by RoHS compliant high-efficiency driver. Minimum starting temperature is -35°C (-31°F).

Mounting Arm - Welded steel with powder coat finish. To fit Ø 3" Tenon.

Pole Adapter - Made from high pressure die cast, low copper aluminum alloy. To fit Ø 3" Tenon.

Glass Lens - Tempered and screened glass lens protects and helps seal optical chamber.

Tool-Less Latch - Tool-less die cast aluminum latch for easy access to light engine.

Access Door - Lower casting features tempered glass lens and a built-in hinge that attaches to upper casting on mounting arm side. Other side is secured with tool-less latch for ease of maintenance.

Surge Protection - (not shown) Designed to protect luminaire from electrical surge (20kA)..

Internal Step-down Transformer - Step-Down Autotransformer for 347V and 480V.

Exterior Luminaire Finish -
Selux utilizes a high quality Polyester Powder Coating. All Selux luminaires and poles are finished in our Tiger Drylac certified facility and undergo a five stage intensive pretreatment process where product is thoroughly cleaned, phosphated and sealed. Selux powder coated products provide excellent salt and humidity resistance as well as ultra violet resistance for color retention. All products are tested in accordance with test specifications for coatings from ASTM and PCI.

Standard exterior colors are White (WH), Black (BK), Bronze (BZ), and Silver (SV). Selux premium colors (SP) are available, please specify from your Selux color selection guide.

5 Year Limited LED Luminaire Warranty - Selux offers a 5 Year Limited Warranty to the original purchaser that the Selux LED luminaire shall be free from defects in material and workmanship for up to five (5) years from date of shipment. This limited warranty covers the fixture, LED driver and LED light engine when installed and operated according to Selux instructions. Fixture suitable for ambient temperatures of 40° C (104° F). For details and exclusions, see "Selux Terms and Condition of Sale."

Listings and Ratings: Luminaire tested to IESNA LM-79-08 and LED tested to LM-80 test standards at 25° C ambient temperature.

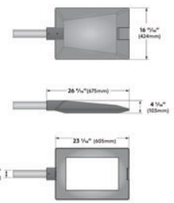
AV6



Specifications

Fixture Housing - Made from high pressure die cast, low copper aluminum alloy.

Gasketing - Continuous molded silicone gasket provides weatherproofing, dust and insect control at all luminaire connections.

Fitter - Part of upper aluminum housing for direct connection to standard Ø 2 ⅛" (60mm) short and long arms, as well as specially designed die cast pole adapter.

LED Array - LEDs mounted to PC boards and directly attached to upper aluminum housing for maximum LED performance and life. For future upgrades, light engine can be removed without tools.

LED Optics - High precision injection molded cross-beam technology reflectors are vacuum metallized. IDA approved "Dark Sky Friendly" at 0° Mounting.

LED Driver - LEDs are driven by RoHS compliant high-efficiency driver. Minimum starting temperature is -35°C (-31°F).

Surge Protection - Surge protection device safeguards electrical components from indirect lighting strikes and surges up to (20kA standard). RoHS compliant.

Mounting Arm - Welded steel with powder coat finish. To fit Ø3" Tenon.

Pole Adapter - Made from high pressure die cast, low copper aluminum alloy. To fit Ø 3" Tenon.

Glass Lens - Tempered and screened glass lens protects and helps seal optical chamber.

Tool-Less Latch - Tool-less die cast aluminum latch for easy access to light engine.

Access Door - Lower casting features tempered glass lens and a built-in hinge that attaches to upper casting on mounting arm side. Other side is secured with tool-less latch for ease of maintenance.

Surge Protection - Designed to protect luminaire from electrical surge (up to 10kA).

Internal Step-down Transformer - Step-Down Autotransformer for 347V and 480V.

Mounting Arm - Welded steel with powder coat finish.

Exterior Luminaire Finish -
Selux utilizes a high quality Polyester Powder Coating. All Selux luminaires and poles are finished in our Tiger Drylac certified facility and undergo a five stage intensive pretreatment process where product is thoroughly cleaned, phosphated and sealed. Emergency	Integral emergency battery pack or emergency circuit optional.
Input Voltage	120V, 277V, 347V, UNV.

Incorporating these components may have limitations or affect the length of the luminaire. Please contact factory for more details.

LED SYSTEM

CRI	Minimum 80 or 90 color rendering index.
CCT	Choice of 2700K, 3000K, 3500K and 4000K color temperature with a great color consistency (within 3-step MacAdam ellipse). Both within fixture and fixture to fixture.
LED life	Minimum 50,000h with 85% of lumen maintenance in 25°C ambient temperature, in compliance with IES LM-80 testing measurements.
Thermal Management	Aluminum housing acting as the heat sink to maximize life.

OPTICS

S satin lens

SATIN LENS
PMMA satin finish (0.060" nominal) 68% trans.

WEIGHT

Surface 4 ft	12.8 lbs / 5.8 kg
Surface 8 ft	24.5 lbs / 11.1 kg

GASKETTED FIXTURE

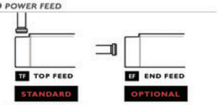
With its gasketted end cap and lens the Wet BEAM 4 LED is made for wet locations, and is ideal for exterior soffits and canopies of malls, hospitals and other institutions.

JOINER SYSTEM

Wet BEAM 4 modular system consists of smaller modules joined and gasketted together allowing for system runs in lengths of 4' and 8' as well as custom lengths up to 8'.

* For continuous rows allow 2" for connectors between each fixture.

POWER FEED



* Not available with 347 V.

FINISH

Powder coated and custom finishes are also available.

APPROVALS

Certified wet locations to UL and CSA standards

WARRANTY

Axis Lighting will warrant defective LEDs, boards, and drivers for 5 years from date of purchase. Warranty is valid if luminaire is installed and used according to specifications. If defective, Axis will send replacement boards or drivers at no cost along with detailed replacement instructions and instructions on how to return defective components to Axis.

Row configuration, specification sheets and mounting spacing guides are available for download at: www.axislighting.com

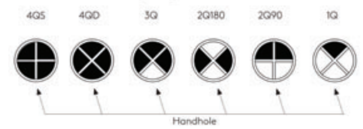
Net Weight (35lbs)

LED Light Engine Distribution Guide



Specifications

1. Fixture Housing - Die cast low-copper and low-iron aluminum fixture body provide corrosion resistance in marine environments.

2. Gasketing - (not shown) Continuous gaskets provide weather-proofing, dust, and insect control between castings.

3. LED Light Engine - (not shown) High efficiency LED light engine equipped with brand-name LEDs, available in 3000K, 4000K, 5000K CCT tolerance within a 3-step MacAdams ellipse, and Amber CCT. Suitable for max ambient temperatures up to 45°C.

4. Optics - (not shown) Proprietary vandal and UV resistant acrylic optic provides optimal light blending between quadrants.

5. Surge Protector - (not shown) Designed to protect luminaire from electrical surge (20kA).

6. Hi-Lo Switching Option - (not shown) Controlled switching between 100% and 30% power. See wiring diagrams for additional details.

7. Low Power Option - (not shown) 60% decrease in Lumen output in same physical package.

8. High Power Option - (not shown) 100% increase in Lumen output in same physical package.

9. Light Chamber - Castings around Light Engine are painted with special matte black light absorbing powder coat paint. Meets International Dark-Sky Association (IDA) requirements B0, U0, and G0 BUG ratings at 3000K CCT. Powers 2Q90, 2Q180, 3Q, or 4Q configurations (refer to lumen matrix on page 3).

10. Low-Temperature Emergency Battery Pack Option - (not shown) Provide 90 minutes of constant-power egress lighting when external power is lost. -20°C to +55°C ambient temperature operation.

Exterior Luminaire Finish - Selux utilizes a high quality Polyester Powder Coating. All Selux luminaires and poles are finished in our Tiger Drylac certified facility and undergo a five stage intensive pretreatment process where product is thoroughly cleaned, phosphated and sealed. Selux powder coated products provide excellent salt and humidity resistance as well as ultraviolet resistance for color retention. All products are tested in accordance with test specifications for coatings from ASTM and PCI.

Standard exterior colors are White (WH), Black (BK), Semi-Matte Black (BL), Bronze (BZ), and Silver (SV). Selux premium colors (SP) are available, please specify from your Selux color selection guide.

5 Year Limited LED Luminaire Warranty - Selux offers a 5 Year Limited Warranty to the original purchaser that the Inula Bollard LED luminaire shall be free from defects in material and workmanship for up to five (5) years from date of shipment. This limited warranty covers the LED driver and LED array when installed and operated according to Selux instructions. For details, see "Selux Terms and Condition of Sale."

Listings and Ratings: Tested to INRTL Wet Location and IESNA LM-79-08 standards. LED tested to LM-80 standards.

Luminaire tested to IK10 standard, IDA Approved and Lighting Facts Certified.

Luminaire and LED tested at 25°C (77°F) ambient temperature.

LED LIFE - LED light engine provides a reported lumen maintenance of 93% at 36,000 hours. L70 calculated greater than 100,000 hours. NRTL Listed (i.e. UL, CSA)

Visit selux.us for our LED End of Life recycling policy.

L600 SERIES

SPECIFICATIONS

Construction

• Recessed housing is constructed from 16 gauge electro-galvanized steel, matte black powder-coated • Surface housing is constructed from 16 gauge satin finished stainless steel or .063" metallic silver powder-coated aluminum • Faceplates are 3/16" metallic silver powder-coated aluminum or satin finished stainless steel, passivated for maximum rust resistance • Fixtures are furnished with stainless steel socket head tamperproof screws • Diffuser is clear tempered glass, set in silicone sealant • Internal baffle is coated matte black to eliminate glare • Optional junction box is cast aluminum with polyester coating • cETLus listed installation in any wall construction and suitable for wet locations in any wall construction • All models suitable for concrete pour.

Electrical

• Fixture is wired with high performance LEDs positioned for 5°, 10° or 15° cutoff (5° standard) • Integral driver is universal voltage • Recessed housing provided with 1/2" conduit knockout on each side, suitable for 4 wire thru-wiring, 2 in 2 out. Surface housing conduit entries located per specification • Optional junction box allows 8 wire thru-wiring, 4 in 4 out. Provided with two 1/2" tapped conduit entrances in the bottom and one 1/2" tapped conduit entrance in each side.

Specify conduit entry locations when ordering.

Options

Junction box: Cast aluminum junction box. Add suffix ☐ **-J** *(Not available on L603 model).*
Dimming: Universal voltage 0-10V driver. Add suffix ☑ **-DIM**. *(Not available on L603 model).*
Cutoff: 10° or 15°. Add suffix ☐ **-10°** or ☐ **-15°**.
No Hole: Fastenerless (not suitable for wet locations). Add suffix ☐ **-NH**
Frosted glass diffuser: Tempered. Add suffix ☐ **-FG**

LED colors: 4000°K (L603, 146 lm), (L603-HO, 384 lm), (L606, 292 lm), (L606-HO, 768 lm), (L609, 438 lm), (L609-HO, 1152 lm), (L612, 584 lm), (L612-HO, 1535 lm). Add suffix ☑ **-4K**. Amber* (FWC compliant, 560nm). Add suffix ☐ **-AMB**. Blue* Add suffix ☐ **-BLU**. *Not available in HO
Antimicrobial white paint: Resist microbial growth. Add suffix ☐ **-AM**

Bronze faceplate: Satin finished, clear coated. Add suffix ☐ **-B**.
Alternate trim color: Black or White. Add suffix ☑ **-BLK** or ☐ **-WHT**.
For Custom color or finish. Add suffix ☐ **-CC** (consult factory).
Sensors: Photocell. Add suffix ☐ **-PC**. Occupancy Sensor. Add suffix ☐ **-OCC**. Button/Switch ☐ **-SW**.

LED wall washer with asymmetrical light distribution

Type: SP
BEGA Product: 33 361
Project: Axon
Voltage:
Color: Black
Options:
Modified:

Housing: One piece die-cast aluminum designed for direct attachment to wall over a horizontally oriented recessed single gang junction box. Die castings are marine grade, copper free (≤ 0.3% copper content) A360.0 aluminum alloy.
Enclosure: Tempered clear glass, retained by one piece die-cast aluminum frame attached to housing with two (2) stainless steel captive set screws threaded into stainless steel inserts. Reflector made of pure anodized aluminum. Fully gasketed for weather tight operation using molded silone gasket.
Electrical: 16.5W LED luminaire, 19.5 total system watts, -30°C start temperature. Integral 120V through 277V electronic LED driver, 0-10V dimming. LED module(s) are available from factory for easy replacement. Standard LED color temperature is 3000K with an 85 CRI. Available in 4000K (85 CRI); add suffix K4 to order.
Note: LEDs supplied with luminaire. Due to the dynamic nature of LED technology, LED luminaire data on this sheet is subject to change at the discretion of BEGA-US. For the most current technical data, please refer to www.bega-us.com.
Finish: All BEGA standard finishes are polyester powder coat with minimum 3 mil thickness. Available in four standard BEGA colors: Black (BLK); White (WHT); Bronze (BRZ); Silver (SLV). To specify, add appropriate suffix to catalog number. Custom colors supplied on special order.
CSA certified to U.S. and Canadian standards, suitable for wet locations. Protection class IP65
Weight: 3.5 lbs

Note: Fixture will oriented 180 degrees, not as an uplight as depicted

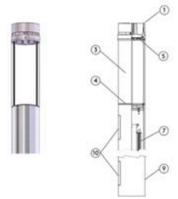
EXRL



1. Luminaire Cover / External Heat Sink - Specifications Low-copper, marine-grade aluminum die cast cover, with shroud for smooth crisp form to reflect and complement the column design. Designed for optimal heat dissipation even in high temperature environments.

2. Gasketing - (not shown) Continuous one piece gaskets made from UV and ozone resistant silicone. Molded gaskets ensure IP65 rating, dust, and insect control throughout the luminaire head.

3. Shielding - Clear, impact resistant, UV stabilized polycarbonate cylinder creates optical chamber, minimum wall thickness 0.118" (3mm). IK10 rated.

4. Column Fitter - Low copper, marine-grade aluminum die-cast fitter, with built-in gasketing ridges, for smooth transition to column.

5. LED Array - High Flux LEDs mounted to metal core PCB and attached to external heat sink for maximum LED performance and life. CCT tolerance within a 3 step bin and provided with a minimum CRI of 80. LED light engine has a reported lumen maintenance of 97.5% at 50,000 hours. L70 calculated greater than 100,000 hours.

6. LED Optics - (not shown) Proprietary technical Optics (R1, R2, R3, R4, R5S and R5R) use Selux signature light pattern acrylic lens holder to secure proprietary silicone optics. Internal micro house side shield available for distributions types I, II, III & IV.

7. LED Driver - LEDs are driven by RoHS compliant constant current programmable LED driver. Driver includes 0-10V dimming to 10%, meets the requirements of IP66. Driver assembly located inside the column and accessible through the upper hand hole.

8. Surge Protector - (not shown) Designed to protect luminaire from electrical surge (20kA).

9. Column Body - 200mm extruded smooth marine-grade aluminium, minimum wall thickness 0.118" (3mm).

10. Access Doors - Upper and lower 4" x 7" (78mm x 178mm) hand holes provided for in-field column assembly and maintenance. Flush cover and stainless steel tamper-resistant hardware included.

Exterior Luminaire Finish - Selux utilizes a high quality Polyester Powder Coating. All Selux luminaires and poles are finished in our Tiger Drylac certified facility and undergo a five stage intensive pretreatment process where product is thoroughly cleaned, phosphated and sealed. Selux powder coated products provide excellent salt and humidity resistance as well as ultraviolet resistance for color retention. All products are tested in accordance with test specifications for coatings from ASTM and PCI.

Standard exterior colors are White (WH), Black (BK), Bronze (BZ), Semi-Matte Black (BL), and Silver (SV). Selux premium colors (SP) are available, please specify from your Selux color selection guide..

5 Year Limited LED Luminaire Warranty - Selux offers a 5 Year Limited Warranty to the original purchaser that the Exelia LED luminaire shall be free from defects in material and workmanship for up to five (5) years from date of shipment. This limited warranty covers the LED driver and LED array when installed and operated according to Selux instructions. For details, see "Selux Terms and Condition of Sale."

Listings and Ratings: Tested to NRTL Wet Location and IESNA LM-79-08 standards. LED tested to LM-80 standards. Luminaire and LED tested at 25ºC (77ºF) ambient temperature.

NRTL Listed (i.e. UL, CSA)

Specifications

Fixture Housing - Made from high pressure die cast, low copper aluminum alloy.

Gasketing - Continuous molded silicone gasket provides weatherproofing, dust and insect control at all luminaire connections.

Fitter - Part of upper aluminum housing for direct connection to standard Ø 2 ⅜" (60mm) short and long arms, as well as specialty designed die cast pole adapter.

LED Array - LEDs mounted to PC boards and directly attached to upper aluminum housing for maximum LED performance and life. For future upgrades, light engine can be removed without tools.

LED Optics - High precision injection molded cross-beam technology reflectors are vacuum-metallized. IDA approved "Dark Sky Friendly" at 0° Mounting.

LED Driver - LEDs are driven by RoHS compliant high-efficiency driver. Minimum starting temperature is -35ºC (-31ºF).

Surge Protection - Surge protection device safeguards electrical components from indirect lighting strikes and surges up to (20kA standard). RoHS compliant.

Mounting Arm - Welded steel with powder coat finish. To fit Ø3" Tenon.

Pole Adapter - Made from high pressure die cast, low copper aluminum alloy. To fit Ø 3" Tenon.

Glass Lens - Tempered and screened glass lens protects and helps seal optical chamber.

Tool-Less Latch - Tool-less die cast aluminum latch for easy access to light engine.

Access Door - Lower casting features tempered glass lens and a built-in hinge that attaches to upper casting on mounting arm side. Other side is secured with tool-less latch for ease of maintenance.

Surge Protection - Designed to protect luminaire from electrical surge (up to 10kA).

Internal Step-down Transformer - Step-Down Autotransformer for 347V and 480V.

Mounting Arm - Welded steel with powder coat finish.

Exterior Luminaire Finish - Selux utilizes a high quality Polyester Powder Coating. All Selux luminaires and poles are finished in our Tiger Drylac certified facility and undergo a five stage intensive pretreatment process where product is thoroughly cleaned, phosphated and sealed. Selux powder coated products provide excellent salt and humidity resistance as well as ultra violet resistance for color retention. All products are tested in accordance with test specifications for coatings from ASTM and PCI.

Standard exterior colors are White (WH), Black (BK), Semi-Matte Black (BL), Bronze (BZ), and Silver (SV). Selux premium colors (SP) are available, please specify from your Selux color selection guide.

5 Year Limited LED Luminaire Warranty - Selux offers a 5 Year Limited Warranty to the original purchaser that the Selux LED luminaire shall be free from defects in material and workmanship for up to five (5) years from date of shipment. This limited warranty covers the fixture, LED driver and LED light engine when installed and operated according to Selux instructions. Fixture suitable for ambient temperatures of 40° C (104° F). For details and exclusions, see "Selux Terms and Condition of Sale."

Listings and Ratings: Luminaire tested to IESNA LM-79-08 and LED tested to LM-80 test standards at 25° C ambient temperature.

Production Intervals	2.188"	3.25"	2.188"	2.188"	3.25"	3.25"	3.25"

PRODUCT FEATURES

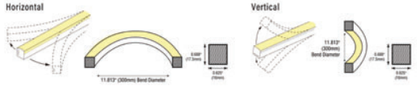
- Dimmable
- 50,000 hour life
- Flat profile for streamline projects
- Horizontal or vertical bending option
- IP67 or IP68 option
- UL-listed for indoor and outdoor use
- Factory-installed power feed
- Injection-molded flush end caps
- For use with 24V power supplies

SPECIFICATIONS

Series	SW3 - Signwave™ 3
Input Voltage	24V DC
Max Run Length	Unlimited, Refer to **Power Feed** Above
Lumens	162 Lm/ft (White)
Beam Angle	160°
Dimensions	0.625"(16mm) × 0.688"(17mm)
CRI	80+
Dimming Options	PWM, Triac, 0-10V, DMX, Hi-lume
Temp Range	-4°F (-20°C) to 113°F (45°C)

BENDING OPTIONS & PROFILE DIMENSIONS

Horizontal



Vertical

Conforms to ANSI/UL Standard 2108
Certified to CAN/CSA Standard C22.2 No. 250.0

RoHS COMPLIANT | cULus LISTED | 24V DC | WET RATED

PRODUCT SPECIFICATIONS

LED Light Engine Fixture to have color consistency within a 2-step MacAdam ellipse • 2700K, 3000K, 3500K, or 4000K color temperatures are available with 80 CRI minimum • 2700K and 3000K also available with 90 CRI minimum.

Modular Optics 45° cutoff to source and source image • Available with field interchangeable optics in 15°, 24°, 35° and 45° distributions • Additional distributions of 20°, 30°, 40°, 50°, 55°, 60°, 60° x 20° FWHM can be achieved with the use of the diffusing films and spot primary optic.

Adjustability Patented Acu-Aim™ precision geared hot-aiming achieves 365° rotation, 45° tilt with any ceiling thickness from ½" to 1" • Acu-Aim™ translates light engine forward as it is aimed off nadir, ensuring maximum light and low brightness • Black aiming mechanism preserves dark aperture.

Reflector Die cast trim in white or black with black shield that eliminates visibility into housing.

Trims Style Self Flanged and Flangeless styles are available • Flangeless installation is compatible with drywall or solid ceilings such as wood/stone/tile.

LED Driver Choice of two drivers to accommodate voltages from 120-277 volts AC at 50/60Hz • Dims as low as 1% with most incandescent and electronic low voltage dimmers or most 0-10V dimmers • For a list of compatible dimmers, refer to ACULED12DIM6 • Power Factor > 0.9 • Field replaceable from above or below ceiling.

Life Rated for 50,000 hrs at 70% lumen maintenance.

Codes/Labels UL and cUL listed for wet locations depending on trim • ICAT rated new construction fixture meets energy code Air Leakage requirements per ASTM E283 • ENERGY STAR® Certified with all color temperatures with 80 CRI and spot, narrow flood, and flood optics • Union made.

New Construction Mounting Features patented (US Patent 8,038,113) Pro-Vi™ bar hanger system, permitting quick placement of housing with 24" on-center joists or suspended ceilings • Also features vertically adjustable mounting brackets (butterfly brackets).

Wiring Housings includes multiple ½" knockouts and is compatible with rigid conduit and flexible supply • All housings supplied with quick connect electrical connectors.

Ceiling Thickness ½" – 1½" ceiling • Vertical aiming in ceiling 1" to 1 ½" is reduced from 40° to 25°.

SITE LIGHTING CUT SHEETS

DEVELOPMENT REVIEW NARRATIVE

DEVELOPMENT REVIEW BOARD GUIDELINES:

A. In considering any application for development, the Development Review Board shall be guided by the following criteria:

1. The Board shall examine the design and theme of the application for consistency with the design and character components of the applicable guidelines, development standards, Design Standards and Policies Manual, master plans, character plan and General Plan.

The Axon campus has been designed with a consistent theme throughout the entire site, which conforms to the applicable guidelines, development standards, Design Standards and Policies Manual, master plans, Greater Airpark Area Plan and the General Plan. Consistency with these plans are detailed thoroughly in the rezoning narrative.

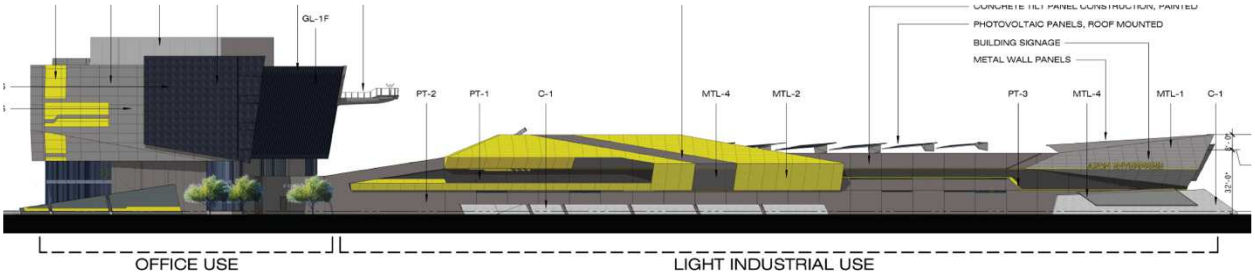
2. The architectural character, landscaping and site design of the proposed development shall:

a. Promote a desirable relationship of structures to one another, to open spaces and topography, both on the site and in the surrounding neighborhood;

The site has been designed and planned cohesively to ensure maximum compatibility between the structures, open space and landscape. The main Axon campus building is located at a central location on the site, with the parking and open space leading from the surrounding streets to the building.

b. Avoid excessive variety and monotonous repetition;

Axon has proposed a building that is interesting, varied and exciting. The materials are harmonious in color and texture but avoid monotony and the proposed colors tastefully reflect the Axon company signature look and colors. A sleek, modern look is achieved through the use of glazing, metal panels and exposed concrete. The building elevations reflect the unique, iconic design and shape that feature a central building high point which then moves to lower elevation heights as the building nears the borders of the site.



c. Recognize the unique climatic and other environmental factors of this region to respond to the Sonoran Desert environment, as specified in the ***Sensitive Design Principles****:*

1. The design character of any area should be enhanced and strengthened by new development.

- Building design should consider the distinctive qualities and character of the surrounding context and, as appropriate, incorporate those qualities in its design.

The Axon campus building is designed to consider the qualities and character of the surrounding context and has incorporated some of these qualities into its design. The building design reflects the theme and color character of the existing commercial nature of the area, near the existing Axon building and office complexes, but the Axon campus distinguishes itself with a unique design.

This design intends to be minimally invasive to the natural feel of this area by featuring a large amount of glazing. The building color palette is muted in grey metal panels and exposed concrete, creating a desert industrial aesthetic.

- Building design should be sensitive to the evolving context of an area over time.

The Axon campus will be located in an undeveloped location near the Loop 101 Freeway and Hayden Road within the Greater Airpark Area. This area is envisioned as a mainly employment centric hub featuring industrial uses and design. The building is designed to create a lasting presence with quality materials and architectural features that incorporates existing character while solidifying the building's unique, iconic design as one-of-a-kind. The inclusion of a simple natural color palette will facilitate further cohesive development with a clean contemporary design.

2. Development, through appropriate siting and orientation of buildings, should recognize and preserve established major vistas, as well as protect natural features such as:

- Scenic views of the Sonoran desert and mountains

The site is located at the southeast corner of Hayden Road and the elevated Loop 101 Freeway. Given the proximity to the freeway overpass and on- and off-ramps, the development will not significantly alter the views of the desert from Hayden Road.

- Archaeological and historical resources

A Cultural Review was compiled by Arizona State Land Department for the subject site in January 2020. The review reveals that no cultural resources were observed. If cultural resources are found during the course of construction, appropriate measure will be taken to ensure that any archeological, paleontological or historical objects are reported to the Director of the Arizona State Museum pursuant to A.R.S. §41-844.

3. Development should be sensitive to existing topography and landscaping.

- A design should respond to the unique terrain of the site by blending with the natural shape and texture of the land while minimizing disturbances to the natural environment.

The building is designed to reflect natural changes in the desert environment and elevations, including rock formations and mountains. The Axon campus building design is inspired by space and science fiction and blends both this modern and contemporary concept with the character of the existing buildings around the site and the mountain and rugged terrain of the Sonoran desert. Additionally, the rounded triangular building shape mirrors the configuration of the parcel itself.

4. Development should protect the character of the Sonoran desert by preserving and restoring natural habitats and ecological processes.

The site is planned to be planted with native trees, shrubs and bushes. This will protect the character of the Sonoran desert and restore natural habitats. The native Sonoran desert plants included in the planting palette are as follows: Blue Palo Verde and Ironwood Trees, Chuparosa and Creosote shrubs, Century Plants, Saguaro cacti, Ocotillo accents and Triangle Leaf Bursage and Black Dalea groundcover.

5. The design of the public realm, including streetscapes, parks, plazas and civic amenities, is an opportunity to provide identity to the community and to convey its design expectations.

- Streetscapes should provide continuity among adjacent uses through use of cohesive landscaping, decorative paving, street furniture, public art and integrated infrastructure elements.

The streetscape will provide continuity by improving Mayo Boulevard and the roundabout at Perimeter Drive. This portion of improvements does not include Hayden Road streetscape but a cohesive landscape palette is proposed for the north side of Mayo Boulevard, including native desert trees and shrubs consistent with existing nearby landscaping.

6. Developments should integrate alternative modes of transportation, including bicycles and bus access, within the pedestrian network that encourage social contact and interaction within the community.

The site is located at the southeast corner of Hayden Road and the Loop 101 Freeway with convenient access to an existing Pedestrian / Bicycle Corridor. The site is located close to nearby multi-family residential development, providing easy access for multi-modal transportation for employees residing close to the site.

7. Development should show consideration for the pedestrian by providing landscaping and shading elements as well as inviting access connections to adjacent developments.

- Design elements should be included to reflect a human scale, such as the use of shelter and shade for the pedestrian and a variety of building masses.

The proposed development will be well landscaped and reflect the human scale from Hayden Road and Mayo Boulevard. As the building nears the Loop 101 Freeway, the building scale is enlarged, providing scale to the vehicles traveling on the Freeway.

The building mass will be broken up into a variety of heights and materials including metal and glass panels and painted different shades of grey with Axon Yellow accents. The front (south) of the building, facing Mayo Boulevard, will consist of glass and grey metal panels mixed with concrete. The combination of colors and material create a unique, modern, architecturally interesting and appealing design.

8. Buildings should be designed with a logical hierarchy of masses:

- To control the visual impact of a building's height and size

The highest point of the Axon building is located at the entrance, facing the parking lot and ensuring appropriate access to the building. The building moves to lower elevation heights as the building gets narrower. The impact of the building height will be similar to that of nearby freeway elevations.

- To highlight important building volumes and features, such as the building entry.

As described above, the important features of the building will be accented by changes in the building height – the tallest section of the building at the building entrance and widest section. Other features of the building include an observation deck on the northwest side of the building entrance portion overlooking the manufacturing portion of the building.

9. The design of the built environment should respond to the desert environment:

- Interior spaces should be extended into the outdoors both physically and visually when appropriate

The Axon campus building is designed to unite the interior and exterior building spaces. This includes the extension of the observation deck from the 5th floor and the inclusion of an atrium on the ground level, which opens up the building from the ground floor up to the fifth floor. An amphitheater is also planned at the front (southeast) of the building, along with tiered event space and an outdoor dining patio on the west side of the building.

- Materials with colors and coarse textures associated with this region should be utilized.

The hardscape planned for the exterior of the site will incorporate the colors and textures of the region, including plain gray concrete, finished in light broom and integral color concrete with a light acid etch finish. Raised planters are proposed in the tiered event space, which will feature native desert plants, bringing the surrounding character of the desert into the project design.

The landscape colors are generally uniform in native shades of green with some accents provided by flowering ground covers and shrubs.

- A variety of textures and natural materials should be used to provide visual interest and richness, particularly at the pedestrian level. Materials should be used honestly and reflect their inherent qualities

The materials and textures provided will be used in their natural state, including metal and concrete panels. The panels will either be used with a natural finish or be painted a complimentary neutral color to provide richness and visual interest. Because the site is intended to function as a campus, pedestrian experience is key to ground floor design to convey a desert industrial aesthetic that pays homage to Axon's technical nature and Scottsdale's natural desert beauty.

- Features such as shade structures, deep roof overhangs and recessed windows should be incorporated.

Shade will be provided via roof overhangs, angled architecture and a shade structure over the tiered event space.

10. Developments should strive to incorporate sustainable and healthy building practices and products.

- Design strategies and building techniques, which minimize environmental impact, reduce energy consumption, and endure over time, should be utilized.

The site has been designed to incorporate a xeriscape landscape palette to minimize water usage. Additional sustainability features of the building include high performance glazing, photovoltaic (solar) panels, and low to no VOC interior materials and finishes. The large amounts of glass provided on the exterior of the building will ensure an abundance of daylight into the internal spaces, which will reduce lighting and energy usage.

11. Landscape design should respond to the desert environment by utilizing a variety of mature landscape materials indigenous to the arid region.

- The character of the area should be emphasized through the careful selection of planting materials in terms of scale, density, and arrangement

The landscape palette is a mixture of native desert trees (Ironwood, Blue Palo Verde), shrubs (Creosote, Chuparosa), accents (Century Plant,

Ocotillo, Saguaro) and ground cover (Black Dalea, Triangle Leaf Bursage) intermixed with hybrid trees and plants bred for the Sonoran desert environment (Thornless Mesquite, Pink Dawn Chitalpa). The arrangement and density of the plants has been carefully planned to provide groundcover and shade but reflect natural groupings and plantings.

- The landscaping should complement the built environment while relating to the various uses.

The planned landscape planting around the building is orderly and organized, with raised planters around the building base and tiered event space. As the landscape is distanced further from the building, it is arranged to reflect the natural environment and plant groupings and densities.

12. Site design should incorporate techniques for efficient water use by providing desert adapted landscaping and preserving native plants.

- Water, as a landscape element, should be used judiciously

The landscape palette has been carefully curated with the natural Sonoran desert in mind – native, low water usage plants have been chosen for the site. Water usage for landscape will be minimal and the water provided to the site for landscape will be used judiciously.

- Water features should be placed in locations with high pedestrian activity.

A water feature has been designed for the Axon campus site, at the front of the building entrance, which will have the highest density of pedestrian activity. The water feature will adhere to City of Scottsdale Code of Ordinances Article VII Division I Section 49-242 for Water Conservation.

13. The extent and quality of lighting should be integrally designed as part of the built environment.

- A balance should occur between the ambient light levels and designated focal lighting needs.

The lighting for the Axon campus has been designed to balance between the ambient light levels and designated focal lighting needs while serving as a unique design element to the iconic feature building in Axon signature Yellow.

- Lighting should be designed to minimize glare and invasive overflow, to conserve energy, and to reflect the character of the area.

The site lighting has been designed to minimize glare and invasive overflow. The lighting will be designed to be no more intense than light from the adjacent Loop 101 Freeway.

14. Signage should consider the distinctive qualities and character of the surrounding context in terms of size, color, location and illumination.

- Signage should be designed to be complementary to the architecture, landscaping and design theme for the site, with due consideration for visibility and legibility.

The Axon campus signage will be designed to be both unique and identifying as well as tasteful and considerate of the character of the surrounding area. Future signage will be integrated with the overall design aesthetic including materials and colors.

*d. Conform to the recommendations and guidelines in the **Environmentally Sensitive Lands (ESL) Ordinance**, in **the ESL Overlay District**; and*

The Axon campus site is not located in the ESL Overlay District.

*e. Incorporate unique or characteristic architectural features, including building height, size, shape, color, texture, setback or architectural details, in the **Historic Property Overlay District**.*

The Axon campus site is not located in the Historic Property Overlay District and does not have any existing buildings on the site.

3. Ingress, egress, internal traffic circulation, off-street parking facilities, loading and service
areas and pedestrian ways shall be so designed as to promote safety and convenience.

As shown in the Pedestrian Circulation Plan and Vehicular Circulation Plan, vehicular access to the site comes from Hayden Road, along Mayo Boulevard and into two separate entries, which lead directly to the vehicular parking locations. Pedestrian circulation will lead from the paring areas directly into the building from all sides of the building.

The Axon campus loading and service area is situated on the north side of the building, away from the pedestrian uses and in a distinct and safe designated location.

4. If provided, mechanical equipment, appurtenances and utilities, and their associated screening shall be integral to the building design.

Mechanical equipment is provided and screened in a manner that blends into the building design with the use of grey metal panels, similar to those used on the lower elevations of the building. Portions of mechanical equipment adjacent to the Loop 101 Freeway will not be screened as the freeways itself will act as the screening.

5. Within the Downtown Area, building and site design shall:

a. Demonstrate conformance with the ***Downtown Plan Urban Design & Architectural Guidelines****;*

b. Incorporate urban and architectural design that address human scale and incorporate pedestrian-oriented environment at the street level;

c. Reflect contemporary and historic interpretations of Sonoran Desert architectural traditions, by subdividing the overall massing into smaller elements, expressing small scale details, and recessing fenestrations;

d. Reflect the design features and materials of the urban neighborhoods in which the development is located; and

e. Address building mass, height, materials, and intensity transitions between adjacent/abutting Type 1 and Type 2 Areas, and adjacent/abutting Type 2 Areas and existing development outside the Downtown Area.

The proposed Axon campus site is not located within the Downtown Area.

6. The location of artwork provided in accordance with the Cultural Improvement Program or Public Art Program shall address the following criteria:

a. Accessibility to the public;

b. Location near pedestrian circulation routes consistent with existing or future development or natural features;

c. Location near the primary pedestrian or vehicular entrance of a development;

d. Location in conformance with the Design Standards and Policies Manual for locations affecting existing utilities, public utility easements, and vehicular sight distance requirements; and

e. Location in conformance to standards for public safety.

The proposed Axon campus is not utilizing the PDB Overlay District zoning in Scottsdale.

B. The burden is on the applicant to address all applicable criteria in this section.
This narrative addressed the above criteria applicable to the Axon campus development.

DESIGN GUIDELINES FOR OFFICE DEVELOPMENT

The following Design Guidelines for Office Development have been addressed for the proposed Axon campus development:

Site Design and Planning:

Natural and Built Site Characteristics

Topography – Grading / Drainage

1. *Site planning should respond to the natural characteristics of a site such as topography/ drainage patterns, existing vegetation, and visual resources. Proposed development (i.e. buildings, parking, and other features) should be designed and adapted to the specific site as opposed to altering the character and form of the site to accommodate development.*

   The site is graded uniquely due to its proximity to the Loop 101 Freeway as well as a drainage channel currently being constructed. These present some constraints to grading the site but our civil engineers have designed the site so as to not interfere significantly with the existing grading conditions. Drainage will be implemented through numerous runoff basins and landscape islands. The landscape palette will include various Sonoran desert plant species that will effectively provide soil erosion control and stabilization. The building itself is a one-of-a-kind, iconic design intended to provide corporate identity of Axon at this location.

   Vegetation

   The vegetation provided will include a variety of native plant species such as Ironwood and Blue Palo Verde trees, Ocotillo and Saguaro cacti. Only desert-appropriate vegetation has been planned for the site and will be placed in strategic, natural locations and densities.

2. *The orientation of buildings and outdoor spaces should consider the effect of sun angles and other climatic conditions and the preservation of views.*

   The Axon campus building is oriented at a diagonal so no one side of the building will receive the full effect of the sun on either east or west and the building architecture includes angles and building overhangs to protect southwest facing walls and windows from the sun. The location of the site, at the southeast corner of the Loop 101 and Hayden Road, ensures that the location of the building will not block views of the desert to the north as the Freeway on- and off-ramps and overpass exist in this location. Additionally, the building will be built to preserve the views to the direct east of the site.

Outdoor space is planned for the entryway of the building, with tiered event space covered by a shade canopy and additional covered outdoor dining space on the west side of the building. An atrium has been included inside the building, connecting the ground level to the fifth level of the building, providing employees the sensation of being outside.

Response to Context

3. *Build upon the established development pattern of the surrounding area.*
   The site is located at the intersection of Hayden Road and the Loop 101 Freeway, surrounded by various commercial and industrial uses and buildings and vacant parcels. The building reflects that character of the built environment, using greys, metal, glass and concrete materials that have been utilized by other existing buildings close to the site. The plant palette has been planned with native desert plant species, pulled from southwestern Arizona.

4. *Site plans should demonstrate an understanding of how the new development will be served by utility systems. The development team should work proactively with utility providers to coordinate and locate to the developments advantage any above ground equipment and related improvements considering that the best location(s) for such equipment is not always the one that is most convenient or least expensive. Below grade equipment vaults should be considered in some contexts if a grade level solution that is visually unobtrusive cannot be achieved.*
   The utility locations for this site have been planned and are provided on the landscape plans and provided for on the Preliminary Improvement Plan.

5. *Locate above ground utility equipment and related improvements away from visually featured areas of the landscape and where possible 30 to 50 feet back from important intersections. Where possible, group or co-locate equipment to more effectively provide accessibility and screening.*
   Utility locations have been carefully planned and are located away from important intersections.

6. *The site plan design should demonstrate a coordinated approach with the site plans of adjacent development (existing or planned).*
   The Axon campus site is designed with a similar approach as other sites in the vicinity. The main building will be separated from the surrounding uses and lots by the perimeter drive (Mayo Boulevard), parking and landscape. Mayo

Boulevard is a shared access drive from Hayden Road and services the neighborhood and commercial buildings to the south.

The site has been designed to separate refuse, loading, etc. from the pedestrian and employee access to the building. Loading and refuse is located off of a separate drive which does not conflict with pedestrian uses. Additional phases of the site, including potential civic uses and future Axon buildings have been planned for with street alignments off of Hayden Road.

7. *Not all development contexts are suitable for continuation in some development proposals nor do all areas or uses within in a community always present opportunities for interface. In situations where the continuation of an existing pattern of development is not desirable or is not feasible, the applicant should establish and document in the project narrative why the proposed design alternative is preferred and how the project will benefit the neighborhood and the community.*
   The site is situated in an ideal location for the Axon campus uses – other commercial uses exist in the area, and the close confines of the Loop 101 Freeway make the site undesirable for residential uses.

8. *Unless constrained otherwise, buildings should have a strong relationship to the street including a functional public entrance that is also a visual focus for the building. In place of street oriented public entrance, a strong pedestrian connection that establishes a sense of a formal public entry may be substituted.*
   The building will not necessarily be used or accessed by the general public. The entryway of the building is strongly defined with a water feature, arcaded entryway and interior Axon logo, all of which promotes intuition of a formal entrance.

9. *Where appropriate buildings should be used to help enclosure and define exterior spaces that are human scaled and furnished to encourage human use.*
   The Axon campus building will include an exterior tiered amphitheater and seating area, shaded by a canopy, for employee and company use. This area will be accented with landscape planters and a water feature, tastefully designed at human scale and encourage human use.

10. *The siting of buildings and parking areas should reinforce existing desirable spatial characteristics such as a common setback, rhythms or patterns established by building masses and their relationship to the street and to each other*

(illustration). Parking in front setbacks is generally discouraged especially in areas with high pedestrian activity or potential.

The building and the parking relate to each other appropriately, separated by obvious drives and landscape islands. The parking and parking lot aisles all lead to the building entrance and parking is located behind the landscape setbacks from the perimeter streets.

Circulation and Parking

11. *The circulation and parking areas of adjoining sites should be coordinated to the extent possible in the interest of efficiency and to reduce the dominance of the private automobile on the community landscape. Simultaneously, pedestrian movement should be reinforced and supported by site plans wherever possible in the interest of enhancing the walk-ability of commercial areas. The desirability of connectivity to residential development should be evaluated on a case-by-case basis.*

    This site will utilize the existing street system of Mayo Boulevard, with access to Hayden Road. Additional, interior access road will be constructed around the building and through the site, ensuring that the appropriate vehicles are able to access their designated locations, without pedestrian conflicts.

12. *Developments that exceed the parking required by City code or recognized industry standard are discouraged. All projects should seek opportunities and incorporate design features or transportation management strategies that strive to reduce automobile use (i.e. enhanced accessibility to public transit, enhanced pedestrian connectivity, trip reduction programs).*

    Although the development at this phase will exceed the required number of parking spaces (1,049 required and 1,083 provided), the 34 extra vehicular parking spaces ensure that all employees have parking and that parking for the Axon campus will not spill over into the adjacent neighborhood or other commercial uses. Additionally, the parking provided may serve future development on the rest of the site at a later date. At this time, the site and the adjacent streets are not serviced by the Valley Metro transit system.

13. *Site planning should work to disperse parking areas as opposed to creating singular expanses of pavement.*

    The parking is provided on the site in three separate locations, all separated from each other by landscape islands and drive aisles.

14. The use of varied paving materials (i.e. concrete pavers, stabilized granite and paving materials with textural and color variations) are encouraged to help relieve monotonous expanses of asphalt.

Five different types of paving materials and ground cover are proposed for the site including plain gray concrete in Light Broom finish, Integral Color Concrete in Light Acid Etch finish, asphalt, 3"-8" Stone Cobble and ½" Screened Decomposed Granite. These various ground covers provide textural and color variation and relieve monotony.

Pedestrian, Transit and Bicycle Facilities

18. Clearly delineated pedestrian paths (or open plazas) should connect building(s) with each other, parking areas, perimeter sidewalks and trails, and transit facilities. Developments are encouraged to make internal connections to adjoining sites whenever such connections will encourage walking over driving to the same destination.

The pedestrian paths connect to the building entrance and each other, leading from the parking areas. The surrounding uses are commercial and industrial in nature and it is unlikely that visitors to the Axon campus will also patronize the surrounding uses.

Enhanced Pedestrian Areas

23. Developments should feature an enhanced pedestrian area(s) (i.e. a plaza, patio, courtyard, linear promenade, terrace or usable landscaped area) scaled accordingly to the size and demands of the particular user or facility. Some zoning categories set forth specific requirements for such spaces.

The Axon campus will provide a tiered event space and amphitheater at the entrance of the building, complete with a shade structure, planter boxes and shade. Additional outdoor space will be provided in the form of a covered dining patio on the west side of the building. The size of the outdoor amenity spaces is appropriate for the size and the demand of the building.

25. Enhanced pedestrian areas should exhibit a higher level of design treatment incorporating seating, water features, sculpture, trash receptacles/ash urns, pedestrian scaled lighting, and other furnishings as appropriate for the specific user.

The dedicated pedestrian area has been designed to incorporate seating, a water feature, pedestrian scale lighting and landscape planters, all which will enhance the outdoor experience of the user.

Architecture

Local Influence on Design

The Greater Airpark Character Area Plan is addressed in the Rezoning portion of the narrative.

1. Building design should consider foremost the unique qualities (both natural and built) character of the surrounding area.

The building is designed to be both unique and unifying to the surrounding area. The materials and colors reflect the commercial and industrial uses surrounding the site and the distant mountain range and the desert landscape pulls from the surrounding Sonoran desert.

2. Multiple buildings on the same site or in closely related areas should share a common architectural theme and a similar vocabulary to that of nearby buildings. Precise replication or mirrored images of the same building on the same site or in the same area without adjustment for the building's unique setting and orientation are discouraged.

The Axon campus building will be the first building on the site. Future buildings are intended to share a common theme with the Axon campus, including glass facades, grey metal panels and unique, identifying signage and accents.

3. Architectural expressions that recall historic or current architectural styles that are unrelated or poorly adapted to the region are generally discouraged.

The building is designed to reflect the current architectural character of the area.

4. Unless otherwise indicated by an historic local context, building designs should demonstrate a coherent response to regional preferences and influences as further delineated in the section on "Regional Context".

The regional context of the area is reflected in the design and architecture of the building.

Regional Influence on Design

5. A building's design should refer to the dominant horizontal landforms of the Sonoran Desert and the southwest. Generally, a building's profile should step in increments to achieve full height. Forms of dramatic vertical proportion should accentuate the horizontal.

The Axon campus building is designed with a tall section of the building at one point and elevation stepdowns. The majority of the building is horizontal, with slight accents protruding from the building.

9. The use of covered walkways, trellises, arcades and similar architectural shading features is encouraged where pedestrian use will be heaviest (i.e. building entries and port-a coheres, pathways between building/transit facilities, perimeter locations where pedestrian activity justifies). Avoid creating areas of redundant shade such as occurs by placing an awning beneath an extended eave.

The building entrance, the most heavily accessed location on the site, will feature a pedestrian arcade, with tiered, shaded event space on each side.

11. Roof pitches should be shallow, not to exceed a pitch of 4:1 (rise to run) or flat.

The proposed roof line of the Axon campus building will either be flat or have a very slight rise, created by metal wall panels and the metal panel exoskeleton.

Scale and Proportion

12. New development should respect the predominant scale of development in the surrounding area especially the scale of development on adjoining sites.

This proposed new development will be approximately the same scale as the surrounding commercial and industrial uses. The scale is appropriate based on the location of the adjacent Loop 101 Freeway and the Hayden Road on- and off-ramps.

Architectural Detail, Material and Color

22. All sides of a building should reference consistent architectural detail and character. All site walls and screen walls should be architecturally integrated with the building or master planned area.

All four sides of the Axon campus building are consistent in architectural detail and character. This includes metal panels, a metal panel exoskeleton and glass glazing.

Mechanical Systems

29. HVAC and other mechanical systems must be screened in a manner that is architecturally integrated and considerate of the overall composition of the building.

The proposed HVAC and other mechanical equipment proposed for the roof will be screened with metal panels that blend into the character of the overall composition of the building.

Office Industrial, Office Warehouse and Office Aircraft Hanger

48. The exterior design of a building should reveal where possible differences in its internal function as expressions of height, massing and the composition of their elevations.

The Axon campus building will include both manufacturing uses and office uses – the office portion will be located at the southeast side of the building, built to five-stories in height. The manufacturing section of the building, angled to a point at the most northwest portion of the building, will have a be housed in a lower elevation "behind" the office use.

49. All industrial buildings, including pre-cast and sit-cast concrete structures, should incorporate sufficient architectural detail in the form of applied finishes, integral textures, patterns, colors, three dimensional recesses and projection.

The building is designed to house both office and industrial uses. The industrial / manufacturing use is located at the northwest section of the building and the exterior elevations have a variety of finished including metal panels, a metal panel exoskeleton, photovoltaic panels and concrete tilt panels. The colors include various shades of grey and signature Axon yellow accents.

Landscape Design

2. Unless otherwise constrained, landscaping should reinforce the character of neighboring properties and abutting streetscapes.

The proposed landscape palette includes various native desert species of trees, shrubs, accents and groundcover, all of which come from the surrounding Sonoran desert and have been used in the surrounding developments.

3. As a general rule, low water use and drought tolerant plants are preferred. Exceptions to this would include perennial plantings in private settings and in public/quasi-public settings that are intended to provide enjoyment to the larger community.

The proposed native species of trees, including Blue Palo Verde and Ironwood, bushes, including Creosote and Chuparosa, accents, including Saguaro and Ocotillo cacti and groundcover, including Black Dalea and Triangle Leaf Bursage, are all native to southwest United States and therefore, are low water use and drought tolerant plants.

12. A combination of dense landscaping, site walls, or berming/mounding should be provided to screen parking facilities, service and loading areas,

maintenance areas, storage areas, trash enclosures, utility cabinets and other similar elements.

Landscape has been provided along the exterior of the west side of the site where the loading and refuse will be located. This section of the site will also be shielded from the view of vehicles on Hayden Road by the future uses planned for the site.

Lighting

5. Lighting should operate for only the minimum number of hours required and should then be reduced in level or turned off. The design of lighting systems should anticipate lighting levels that will vary depending on building use, hours of operation, occupancy, and seasonal changes.

The proposed lighting for the site will conform to the City of Scottsdale standards are be appropriate for the uses on site.

7. Avoid competing light levels and ensure balanced light levels on-site and between adjacent properties. The exterior lighting design must take into consideration background lighting levels, lighting from other sources, and characteristics of the surrounding area.

The lighting planned for the Axon campus will be balanced and take into consideration the background lighting levels from other sources and the characteristics of the surrounding area.

Corporate Identification / Signage

1. Business identity, either by awnings, accent bands, paint or other applied color, literal depiction of a product, decorative roof details or materials should not be the dominant architectural feature. Accent colors should be used judiciously and corporate colors should be modified in intensity and chroma to fit within the larger proposed palette of colors and materials.

The Axon logo and specific yellow color will be applied to the building as an accent rather than a dominant architectural feature. The accent color has been applied to building to provide architectural interest and is complimented by the grey tones and materials of the larger proposed palette.

5. Repetitious signage on a building front should be avoided.

Rather than provide repetitious signage on the building front, the Axon logo is strategically placed inside the building, yet visible to the outside via the glass window fronts and atrium.

SCOTTSDALE DESIGN STANDARDS & POLICIES MANUAL

The following General Considerations & Requirements from the Scottsdale Design Standards & Policies Manual, Chapter 2, Site Planning, have been addressed regarding the Axon campus development.

Additional Design Guidelines

Site Context – Terrain: The Axon campus has been designed to incorporate the natural site landscape features into the design. This includes a native desert plant palette proposed in natural groupings and densities. The site is located at the intersection of the Loop 101 Freeway and Hayden Road, therefore natural views are not readily available but open spaces for employees have been incorporated into the building and native landscape is provided in this location in landscape planters.

Site Context – Buffering for Adjacent Land Uses: The site is diagonally adjacent to a residential use across Mayo Boulevard, therefore, buffering has been employed in the site design to separate the commercial and industrial uses in the Axon building from this residential neighborhood. This includes locating the refuse and loading as far north from the residential use as possible, separating the Axon building from the neighborhood with the parking lot, landscape islands and landscape setbacks, and orienting the building so that the office and commercial portion of the Axon building is the closest to the neighborhood while the manufacturing and industrial portion of the Axon building is located adjacent to the Loop 101 Freeway.

Site Context – Airport & Airpark Development: The site is located within the Scottsdale Airport Area and the Airport Vicinity Development Short Form is provided in the formal submittal package to the City of Scottsdale.

Site Context – Site Design Standards: The mechanical roof equipment will be screened from view via metal screens that match the character and design of the Axon campus building.

Site Context – Outdoor Lighting Ambient Lighting Zones: The proposed site is located in the Suburban Area, which allows for moderate to higher density uses. The site lighting is designed to be appropriate for this location in order to provide a safe, well-lit environment.

On-Site Circulation & Parking Area Design

Emergency Access & Fire Lanes: A Fire Access Plan is provided with this formal submittal plan set and provides locations of fire lanes, FDC and hydrant locations.

Parking Areas: The parking on the site has been designed to conform to the City of Scottsdale Zoning Ordinance. The landscape materials proposed for the parking lot landscape islands are part of the native plant palette curated for this site and are heat tolerant trees, bushes, accents and groundcovers. None of the parking aisles proposed will feature dead end turnarounds and the parking surface will be comprised of asphaltic pavement.

Refuse Collection: The location of the refuse is above ground and located in a location that is easily accessible for refuse trucks. The approach will provide vertical clearance and provides a minimum 50-foot radius for turnaround.

Pedestrian Circulation Within a Development: The pedestrian circulation has been designed to clearly lead from the parking areas to the front of the building entrance and should avoid conflicts with vehicles throughout the site.

Landscape Design

Landscape Design – Design Standards: The plant palette provided will adhere to the ADWR Low Water Use / Drought Tolerant plant list. The plants proposed will not be planted in either a PUE or Emergency Vehicle Access Easement and will be planted at least 7 feet from an underground public water or sewer lines, etc. and the proposed plant palette does not include the prohibited plants listed.

The decomposed granite on the site has been proposed as installed at a minimum of 2" depth, per the design standards. Trees will not be planted to overhand vehicle lanes or within 2 feet overhand at the head of a parking stall.

DEVELOPMENT REVIEW BOARD CRITERIA ANALYSIS

Per Section 1.904. of the Zoning Ordinance, in considering any application for development, the Development Review Board shall be guided by the following criteria:

1. The Board shall examine the design and theme of the application for consistency with the design and character components of the applicable guidelines, development standards, Design Standards and Policies Manual, master plans, character plan and General Plan.

   - ***The applicant states compliance with the Scottsdale Sensitive Design Principles and Office Design Guidelines in detail as part of their project narrative. (Attachment 13)***
   - ***Staff finds that the proposal is generally consistent with the Zoning Ordinance as well as the Character and Design element of the General Plan, and the Greater Airpark Character Area Plan (GACAP), which designates the site as Employment. Additionally, staff has found the site to be designed in general conformance with the Design Standards & Policies Manual.***

2. The architectural character, landscaping and site design of the proposed development shall:
   a. Promote a desirable relationship of structures to one another, to open spaces and topography, both on the site and in the surrounding neighborhood;
   b. Avoid excessive variety and monotonous repetition;
   c. Recognize the unique climatic and other environmental factors of this region to respond to the Sonoran Desert environment, as specified in the Sensitive Design Principles;
   d. Conform to the recommendations and guidelines in the Environmentally Sensitive Lands (ESL) Ordinance, in the ESL Overlay District; and
   e. Incorporate unique or characteristic architectural features, including building height, size, shape, color, texture, setback or architectural details, in the Historic Property Overlay District.

   - ***The applicant states the building is designed to be both unique and unifying to the surrounding area, and to unite the interior and exterior spaces. Materials and colors reflect the commercial and industrial uses surrounding the site and the distant mountain range, and the desert landscape pulls from the surrounding Sonoran Desert. Sustainability features, such as high-performance glazing, solar paneling and low to no VOC interior materials and finishes, have been incorporated into the building design. The site is thoughtfully designed to separate the delivery and service area from the main parking area.***
   - ***Staff finds the proposed development is generally consistent with the City's Sensitive Design Principles and other design guidelines. The proposed building has a contemporary design style utilizing concrete and metal panels, accented by a metal panel exoskeleton. Though gray hues make up a majority of the building façade, "warmer" gray tones are utilized, as opposed to the slate or dark gray tones discouraged by the guidelines. Some of the paneling is yellow in color, which though a corporate color, is consistent with some of the natural desert vegetation. Photovoltaic panels are incorporated into the building design on the east and west sides of the building to promote sustainability. Unique shapes and forms, planer differentiation, and score lines provided in the tilt up panels create visual interest and help break up the mass. Most of the proposed landscaping is selected from the Arizona Department of Water Resources Low Water-Use Drought-Tolerant Plant list.***

3. Ingress, egress, internal traffic circulation, off-street parking facilities, loading and service areas and pedestrian ways shall be designed as to promote safety and convenience.
   - ***The applicant states the proposed plan provides pedestrian connections from the building to the parking areas.***
   - ***Staff finds the Ingress, egress, internal traffic circulation, off-street parking facilities, loading and service areas and pedestrian ways have been designed to promote safety and convenience. The site plan proposes a 5-story office component, and a single-story manufacturing component, with two vehicular access points at Mayo Boulevard. The delivery and service area is thoughtfully located at the northwest corner of the building, effectively separated from the main parking field where the majority of pedestrian circulation is provided. The driveway loops through the front of the site, providing 2 access points on 81st Street. Pedestrian facilities are provided from the parking area to the building entrances. Though not shown, staff will coordinate with the applicant to provide at least one pedestrian connection from the building to Mayo Boulevard.***
4. If provided, mechanical equipment, appurtenances and utilities, and their associated screening shall be integral to the building design.
   - ***The applicant states the proposed mechanical equipment will be roof mounted and fully screened by metal paneling similar to the paneling used in the body of the building.***
   - ***Staff finds the proposed mechanical equipment will be screened by metal paneling that is integral to the building design.***
5. Within the Downtown Area, building and site design shall:
   a. Demonstrate conformance with the Downtown Plan Urban Design & Architectural Guidelines;
   b. Incorporate urban and architectural design that address human scale and incorporate pedestrian-oriented environment at the street level;
   c. Reflect contemporary and historic interpretations of Sonoran Desert architectural traditions, by subdividing the overall massing into smaller elements, expressing small scale details, and recessing fenestrations;
   d. Reflect the design features and materials of the urban neighborhoods in which the development is located; and
   e. Incorporate enhanced design and aesthetics of building mass, height, materials and intensity with transitions between adjacent/abutting Type 1 and Type 2 Areas, and adjacent/abutting Type 2 Areas and existing development outside the Downtown Area.
   - ***This criterion is not applicable.***
6. The location of artwork provided in accordance with the Cultural Improvement Program or Public Art Program shall address the following criteria:
   a. Accessibility to the public;
   b. Location near pedestrian circulation routes consistent with existing or future development or natural features;
   c. Location near the primary pedestrian or vehicular entrance of a development;
   d. Location in conformance with Design Standards and Policies Manual for locations affecting existing utilities, public utility easements, and vehicular sight distance requirements; and
   e. Location in conformance to standards for public safety.
   - ***This criterion is not applicable.***

DEVELOPMENT INFORMATION

Zoning History

The site was annexed into the City in 1963 by Ord. 169 and zoned to Single-family Residential District (R1-35). In 1986, the site was rezoned from R1-35 to the Planned Community (P-C) District with a P-C comparable zoning of I-1 as part of the Core South zoning case (11-ZN-1986). The I-1 District is intended to allow light manufacturing, aeronautical, and office uses to sustain and enhance major employment opportunities. Professional offices, laboratories, manufacturing, and warehousing are permitted as principal uses.

Community Involvement

With the submittal of the application, staff and the applicant notified all property owners within 750 feet of the site. As of the publishing of this report, staff has not received any community input regarding the application.

Context

The subject site is located at the southeast corner of N. Hayden Road and Loop 101 with freeway frontage. This is the first development for this portion of Crossroads. The proposed building is approximately 750 feet from the nearest adjacent residence. Please refer to the context graphics (attached).

Project Data

- Existing Use: Vacant
- Proposed Use: Office/Manufacturing
- Parcel Size: +/- 60 acres (net)
- Office Space: 225,740 square feet
- Manufacturing Space: 147,840 square feet
- Warehousing Space: 27,505 square feet
- Total Building Area: 401,085 square feet
- Floor Area Ratio Allowed: 0.8
- Floor Area Ratio Proposed: 0.13
- Building Height Allowed: 76 feet (exclusive of rooftop appurtenances; 19-ZN-2002#8)
- Building Height Proposed: 76 feet (exclusive of rooftop appurtenances)
- Parking Required: 1,027 spaces
- Parking Provided: 1,042 spaces
- Open Space Required: 590,640 square feet (13.5 acres) at build-out; cumulative
- Open Space Provided: 365,904 square feet (8.4 acres) with this building

Stipulations for the
Development Review Board Application:
Axon
Case Number: 28-DR-2020

These stipulations are intended to protect the public health, safety, welfare, and the City of Scottsdale.

APPLICABLE DOCUMENTS AND PLANS:

1. Except as required by the Scottsdale Revised Code (SRC), the Design Standards and Policies Manual (DSPM), and the other stipulations herein, the site design and construction shall substantially conform to the following documents:
   a. Architectural elements, including dimensions, materials, form, color, and texture shall be constructed to be consistent with the building elevations provided by Smithgroup, with a city staff date of 9/11/2020.
   b. Location and configuration of all site improvements shall be consistent with the site plan provided by Smithgroup, with a city staff date of 9/11/2020, modified to accommodate required infrastructure improvements.
   c. Landscape improvements, including quantity, size, and location shall be consistent with the preliminary landscape plan provided by Smithgroup, with a city staff date of 9/11/2020, modified to accommodate required infrastructure improvements.
   d. The case drainage report provided by Wood Patel and accepted in concept by the Stormwater Management Department of the Planning and Development Services.

RELEVANT CASES:

Ordinance

A. At the time of review, the applicable Zoning cases for the subject site were: 13-ZN-2020 and 19-ZN-2002#6.

ARCHAEOLOGICAL RESOURCES:

Ordinance

B. Any development on the property is subject to the requirements of Scottsdale Revised Code, Chapter 46, Article VI, Section 46-134 - Discoveries of archaeological resources during construction.

ARCHITECTURAL DESIGN:

Ordinance

C. *Building height shall not exceed 82 feet (exclusive of rooftop appurtenances) from the lowest floor elevation, per case 13-ZN-2020.*

ATTACHMENT 16

DRB Stipulations

2. All exterior window glazing shall be recessed a minimum of fifty (50) percent of the wall depth, including glass windows within any tower/clerestory elements. The amount or recess shall be measured from the face of the exterior wall to the face of the glazing, exclusive of external detailing. With the final plan submittal, the developer shall provide head, jamb and sill details clearly showing the amount of recess for all window types.
3. All exterior doors shall be recessed a minimum of thirty (30) percent of the wall depth, the amount of recess shall be measured from the face of the exterior wall to the face of the glazing, exclusive of external detailing. With the final plan submittal, the developer shall provide head, jamb and sill details clearly showing the amount of recess for all door types.

SITE DESIGN:

Ordinance

D. Site design to be modified as needed during construction plan submittal and review to comply with 13-ZN-2020 stipulations.

DRB Stipulations

4. A minimum 6-foot wide pedestrian connection shall be provided from the easternmost roundabout indicated on the site plan to the main entrance of the building.

5. All drive aisles that are fire lanes shall have a minimum width of twenty-four (24) feet.

LANDSCAPE DESIGN:

DRB Stipulations

6. Prior to the issuance of any building permit for the development project, the property owner shall submit landscape improvement plans that demonstrate how the salvaged vegetation from the site will be incorporated into the design of the landscape improvements.
7. Prior to the issuance of any building permit for the development project, the property owner shall submit landscape improvement plans that demonstrate the utilization of the City of Scottsdale Supplement to MAG Standard Specifications for the landscape and irrigation improvements within the public right-of-way median(s).
8. Landscape pots and/or raised landscape planters, with a minimum of 36 inches in diameter, a sufficient depth to support the root system of the plants located in the pots/planters, and an automatic irrigation system, shall be provided (if applicable).

EXTRIOR LIGHTING:

DRB Stipulations

9. *With the exception of the private art features located at the "nose" of the building, the main building entrance and on the roof,* all exterior luminaires shall meet all IES requirements for full cutoff and shall be aimed downward and away from property line, except for sign lighting.
10. Incorporate the following parking lot and site lighting into the project's design:
    a. The maintained average horizontal luminance level, at grade on the site, shall not exceed 2.0 foot-candles. All exterior luminaires shall be included in this calculation.

b. The maintained maximum horizontal luminance level, at grade on the site, shall not exceed 8.0 foot-candles. All exterior luminaires shall be included in this calculation.

c. The initial vertical luminance at 6-foot above grade, along the entire property line shall not exceed 1.0 foot-candles. All exterior luminaires shall be included in this calculation.

VEHICULAR AND BICYCLE PARKING:

DRB Stipulations

11. *Carport design shall be submitted for separate review and administrative approval.*

AIRPORT:

DRB Stipulations

12. With the construction document submittal, the property owner shall submit an FAA FORM 7460-1 to the FAA for any proposed structures, appurtenances and/or individual construction cranes that penetrate the 100:1 slope. The elevation of the highest point of those structures, including the appurtenances, must be detailed on the FAA form 7460-1 submittal. The property owner shall provide Aviation staff a copy of the FAA determination letter prior to building permit issuance.

13. With the construction document submittal, the property owner shall submit an aircraft noise and overflight disclosure notice that is to be provided to occupants, potential homeowners, employees and/or students. The disclosure form shall be in in a form acceptable to the Scottsdale Aviation Director, prior to the issuance of any building permit, not including a native plant permit.

STREET DEDICATIONS:

Ordinance

E. Prior to the issuance of any building permit for the development project, the property owner shall make all 13-ZN-2020 stipulated right-of-way dedications to the City of Scottsdale.

STREET INFRASTRUCTURE:

Ordinance

F. All street infrastructure improvements shall be designed and constructed in accordance with the Infrastructure Master Plans for the site, City of Scottsdale (COS) Supplement to MAG Specifications and Details, and the Design Standards and Policies Manual, and 13-ZN-2020 stipulations.

G. Prior to the issuance of any building permit for the development project, the property owner shall submit and obtain approval of all required documents in accordance with and to construct all 13-ZN-2020 stipulations.

DRB Stipulations

14. All public sidewalks, curbs and gutters shall be integral colored concrete to match Davis, San Diego Buff.

WATER AND WASTEWATER:

Ordinance

H. Prior to the issuance of any building permit for the development project, the property owner shall submit and obtain approval of all required documents in accordance with and to construct all 13-ZN-2020 stipulations.

DRAINAGE AND FLOOD CONTROL:

DRB Stipulations

15. With the civil construction document submittal, the property owner shall submit a final drainage report that demonstrates consistency with the DSPM and the case drainage report accepted in concept by the Stormwater Manager or designee.

    Subsequent submittal shall evaluate and address the following stipulations:

    - Develop and submit exhibit depicting natural pre-development contours to identify locations of highest adjacent grade (HAG) and lowest adjacent grade (LAG). Note, it is important for the design team to be aware of FEMA's requirement to elevate all elechtromechanical equipment servicing subject building to regulatory flood depth (RFD).
    - Design team should to consider regional Basin 53R emergency surface spillway location and associated potential for emergency surface overflow. In event of back to back major rainfall events, malfunctioning basin outfall via two barrel 60 inch pipes, or storm of magnitude greater than design standard; emergency spillway will experience surface overflow and send potentially significant discharge to the project site via existing ADOT LOOP 101 culvert crossings.
    - Develop surface runoff routing summary table, which includes columns of volume required, volume provided and basin drain time.
    - Submit topographic data in support of watersheds depicted on the off site drainage map. Note, offsite flows are subject to change upon review of subject topographic data.
    - Depict pre and post development flows along downstream project boundary. Verify downstream capacity to receive post development flow if they are greater than pre development flows.

16. Demonstrate consistency with the accepted master drainage plan and report.

    a. For any design that modifies the accepted master drainage report, the property owner shall submit a site-specific addendum to the final drainage report and plan, subject to review and acceptance by the Stormwater Manager or designee.

    b. An addendum generated by the final drainage analysis for this site shall be added to the appendix of the final drainage report.

17. All headwalls and drainage structures shall be integrally colored concrete to blend with the color of the surrounding natural desert.

EASEMENTS DEDICATIONS:

Ordinance

I. Prior to the issuance of any building permit for the development project, the property owner shall dedicate all project related, per city published standards and requirements, city easements, to the City of Scottsdale on a final plat or map of dedication with associated site modifications made to accommodate.

ADDITIONAL ITEMS:

DRB Stipulations

18. *Flagpoles, if provided, shall be one-piece conical tapered design and shall not exceed the height of the building.*

Subject: Proposed plans and the impact on the Stonebrook 2 community

Hello this is regarding my opposition to any changes regarding case # 's 716-PA-2020 / 13-ZN-2020 / 28-DR-2020.

I am a resident of the Stonebrook 2 community that will be directly impacted by the future plans regarding the case #'s above. I would like to formally note my opposition to these changes.

I would like to know why the developer is requesting a rezoning from P-C to P-CL-1. Which I believe would allow for a height increase from a 5 story to a 7 story building of which I am completely opposed.

Please inform me of what steps, aside from the virtual open house, I can take in order for my opinion to be heard.

I have resided in my home in Stonebrook 2 since its inception in 1996 and have enjoyed the majestic view of the mountains from my backyard, these buildings will ruin the view which I have enjoyed for the last 24 years.

I am also concerned about the impact of traffic & the future of Mayo Blvd being rerouted. Can someone please explain to me the exact plans for the roads behind and around our development, and the forecasted impact of the traffic from these changes.

Thank You,

Rosemary Catroppa & Grace Rubel
Stonebrook 2 residents since 1996

Survey Response

COMMENT	
Comment:	I have seen the preliminary design for the Axon development which is directly north of my neighborhood in North Scottsdale. Guy Phillips has advised me to reach out to your board regarding this project, specifically the color scheme and futuristic design. To say their current submission is in keeping with any sort of desert motif would be absurd. While there is an open meeting coming up, I do want to get this dialogue going because while we cannot stop progress, we can ask that those in charge remember that we as residents will have to look at this all day and night. The integrity of Scottsdale must be kept intact.

October 2, 2020

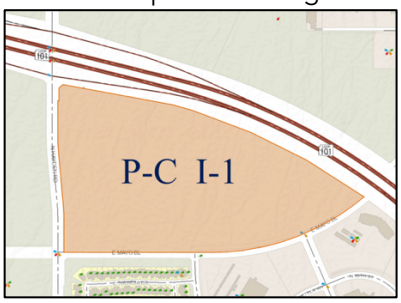
Dear Neighbor:

The purpose of this letter is to invite you to attend a neighborhood open house meeting for a proposed new corporate campus expansion in the Greater Airpark area. The approximately 73.6 acre site is currently zoned Planned Community (P-C) and is located south of the Loop 101 on the east side of Hayden Road.

Our proposal is consistent with the City's General Plan and the Greater Airpark Area Plan, and includes a request to rezone from Planned Community (P-C) to Planned Community Light Industrial District (P-C I-1). The graphic below demonstrates the zoning district before and after the requested rezoning:

Existing Zoning

Proposed Zoning



Additionally, we are requesting amended development standards and a development plan review. Given the ongoing COVID-19 pandemic and in compliance with current CDC and Arizona Department of Health recommendations, we are talking with neighbors over the phone and have scheduled a virtual neighborhood open house meeting to discuss the case with anyone who may have questions regarding this proposal:

Date:	Tuesday, October 13, 2020
Time:	5:30 p.m.
Call In/Log In:	https://global.gotomeeting.com/join/820507045
	Dial In: +1 (872) 240-3212
	Access Code: 820-507-045

If you would like to discuss this project in greater detail prior to or in place of the neighborhood open house meeting, I can be reached at (480) 921-2800 or via e-mail at charles@huellmantel.com. The City of Scottsdale planner assigned to the case is Greg Bloemberg, who can be reached at (480) 312-4306 or through email at gbloemberg@scottsdaleaz.gov. Our case numbers are 716-PA-2020/13-ZN-2020/28-DR-2020.

Again, please do not hesitate to contact me to discuss this proposal further. I am happy to answer any questions you may have.

Thank you.
